Project Description:

Replacement of playground equipment and amenities to support continuous park improvements and playground renovations.

Project Funding Source:

This Project will be funded be the Conservation Trust (50%), and Capital Fund (50%)

Project Timeline:

1-2 playgrounds will be replaced per year. 2027: Community Park, 2028-2029: New Playground (location TBD), 2030: Cowboy Park, 2031: New Playground (location TBD), 2032: Elephant Park

Operating Cost Impact:

There will be no impact on operating costs

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports maintenance of existing assets and infrastructure. Replacing and enhancing playground structures provides better experiences for residents and follows proper parks asset management.

Additional Information/Background

Replace identified park amenities to provide enhanced spaces, updated playgrounds, and user experiences. Replacing and adding features (PPLAB suggested meditative spaces) to support the community's request for park improvements and updated playgrounds. Opportunity for grant funding is determined by improvement(s) and location. Goal to replace 1-2 playgrounds per year to develop an equipment replacement cycle not to exceed 15 years in length. Needs to be prioritized based on asset assessment list (current condition and age of the unit), PPLAB and staff input and known levels of usage.

Project Description:

Replacements of signs located on park maintained properties

Project Funding Source:

Project is funded by the Conservation Trust Lottery Fund

Project Timeline:

Replacements will be made in an on-going fashion as funding allows.

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
Supports maintenance of existing assets and infrastructure

Additional Information/Background

Updated signs improve public communication, wayfinding, accessibility, and safety for residents and visitors while creating a more consistent and professional park system identity. This investment also supports sustainable asset management by proactively replacing deteriorating infrastructure before failures create larger maintenance or liability concerns. Highest needs to be identified at time of replacement by park leadership, PPLAB, and residents to replace and upgrade signs throughout the system.

Project Description:	Maintaining/replacement of Wayfinding and signage improvements across the City's trail network. The city has 7 primary trail corridors identified for wayfinding signage. 2030 Funding to begin maintenance, as needed. OSAB high priority.
----------------------	---

Project Funding Source:	Funded by the Conservation Trust Lottery Fund
-------------------------	---

Project Timeline:	Trail signs will take place in 2030
-------------------	-------------------------------------

Operating Cost Impact:	No impact to operating budget
------------------------	-------------------------------

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

The signs will help provide better resident experience and inform the public of their location, property rules and regulations, and City event information.

Additional Information/Background

Implementation of wayfinding signage throughout the City's trail system supports objectives of the "Maintenance & Management" sub-program as the effort is consistent with good stewardship, promoting best management practices, and enhancing the trail user experience which promotes recreation. Wayfinding signage is a consistent request from community members, advisory board and advocate groups.

Project Description:

Project Funding Source:

Development of a new Cemetery Long Range plan, updating the current plan from 2008. To evaluate general upkeep of the property, the capacity of the land, and historic structures within.

Project Timeline:

Plan study will take place in the year funded

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Support Park management in maintaining and maximizing cemetery assets

Additional Information/Background

Current Cemetery Long Range plan projects facility capacity constraints in addition to challenges of aging infrastructure and grounds. An updated plan is needed to forecast the future of the facility and how to best serve the community's emerging needs.

Council Priority Alignment

Safety
How it aligns to Council Priorities:
<i>Project will reduce downtime from pump failure and assure the pools are functioning for users</i>

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.
2	2. Once a problem is recognized, the next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed.
3	3. The third step is to analyze the problem. This involves identifying the causes of the problem and the factors that contribute to it.
4	4. The fourth step is to develop a solution. This involves identifying the best course of action to address the problem.
5	5. The fifth step is to implement the solution. This involves putting the solution into practice and monitoring its progress.
6	6. The sixth step is to evaluate the solution. This involves assessing the effectiveness of the solution and making any necessary adjustments.
7	7. The seventh step is to communicate the results. This involves sharing the findings of the evaluation with the relevant stakeholders.
8	8. The eighth step is to document the process. This involves recording the steps taken and the results achieved.
9	9. The ninth step is to review the process. This involves reflecting on the experience and identifying areas for improvement.
10	10. The tenth step is to conclude the process. This involves finalizing the report and archiving the data.

The pool circulation pumps are the heartbeat of the pool. To reduce downtime due to pump failure staff will purchase and store replacements so that they are on-hand when needed. The pumps will systematically be replaced during scheduled maintenance. If a catastrophic failure occurs staff will have a replacement ready for a quick repair. When pumps are replaced due to failure, if possible, they will be rebuilt and kept to achieve future savings.

This will be replacement furniture for the pool deck at Memory Square pool.

Funded by the Rec Fund

--	--

No impact

Core Services
How it aligns to Council Priorities:
<i>Taking care of what we have and refresh of the worn furniture.</i>

The Memory Square deck furniture was last purchased in 2015. With this CIP staff will add seating and storage around the deck which gives patrons a more functional space along with replacing dated and/or damaged furniture.

Project Description:

Renovations to upgrade existing park restrooms and add new restroom facilities in select locations

Project Funding Source:

This project will be funded by the Recreation Center Fund (25%), and the Capital Fund (75%)

Project Timeline:

Project is expected to be complete by the end of 2031

Operating Cost Impact:

Renovations to existing facilities will help reduce operating costs associated with repairs, while new facilities will require additional operational commitments.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports maintenance of existing infrastructure and assets while promoting improved recreational experiences for the community.

Additional Information/Background

Contracted renovations to improve customer experience, efficient features, and reduce vandalism. Prioritized through advisory board input, PROS long range plan, staff, work order data and permitted use. Upgrades may include: Miners, Heritage, Cottonwood, Arboretum, Sports Complex. New facility targetted for Annette Brand as a vault or CRX restroom.

Project Description:	Removal and replacement of the pool plaster and gutters in the Program Pool, Splash pool and hot tub.
----------------------	---

Project Funding Source:	Funded by the Rec Fund
-------------------------	------------------------

Project Timeline:	In 2028 pool plaster will need to be removed and replaced
-------------------	---

Operating Cost Impact:	No impact
------------------------	-----------

Core Services
How it aligns to Council Priorities:
Asset Management

The life expectancy of the pool plaster is approximately 10 years. The constant chemical exposure and treatment to keep it white cause breakdowns and cracks. The Program and Splash pool were originally put into place with the renovation of 2018. The pool gutters become brittle over time and break; staff replace as needed but will need to also be completely replaced during the plaster replacement.

Project Description:	Memory Square pool main pool filter return pipe replacement.
----------------------	--

Project Funding Source:	Funded by the Rec Fund
-------------------------	------------------------

Project Timeline:	Completed during the pool's off-season
-------------------	--

Operating Cost Impact:	No impact
------------------------	-----------

A photograph of a swimming pool with a small, white, dome-shaped inflatable structure in the water. The pool is surrounded by a white fence and a blue and yellow striped awning. A blue lounge chair is visible on the pool deck.

Council Priority Alignment	
Core Services	
How it aligns to Council Priorities:	
	<i>This project will significantly diminish the possibility of catastrophic failure</i>

Additional Information/Background

Memory Square has operated with the same filtration return pipes for over 50 years. During the renovation of 2017 the funds were not available to demo and replace the return pipes. This project would remove the old return pipes and relocate new pipes to current code. This will increase water filtration and more importantly it will significantly diminish the possibility of catastrophic failure causing massive water loss and possible pool closure.

Project Description:	Contractor renovations to improve and provide level infield surfaces at Miners, Heritage, Cleo Mudrock, Entietto and the Sports Complex
----------------------	---

Project Funding Source:	Project will be funed by the Recreation Center Fund (50%) and the Capital Projects Fund (50%)
-------------------------	---

Project Timeline:	<i>This work is needed every year to ensure our athletic fields and spaces are safe for the publics enjoyment.</i>
-------------------	--

Operating Cost Impact:	<i>The project will reduce internal operating expenses by utilizing contractor support.</i>
------------------------	---

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>Supports maintenance of existing assets and infrastructure.</i>

Additional Information/Background

Improve the overall playability and condition of baseball infields used by the community and organized recreation programs. Contracted laser grading and infield renovations help eliminate uneven surfaces, low spots, and drainage issues that can contribute to player injuries and unsafe playing conditions. By prioritizing renovations in coordination with Recreation staff and permitted use schedules, the City can proactively address the highest-need fields and maintain safe, reliable facilities for residents and visitors. Ongoing assessments by staff and contractors ensure that each renovation is tailored to the specific condition of the field and completed to an appropriate standard for long-term safety and performance.

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.
2	2. Once a problem is recognized, the next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed.
3	3. The third step is to analyze the problem. This involves identifying the causes of the problem and determining the scope of the problem.
4	4. The fourth step is to develop a solution. This involves identifying potential solutions and evaluating them based on their feasibility and effectiveness.
5	5. The fifth step is to implement the solution. This involves putting the chosen solution into action and monitoring its progress.
6	6. The sixth step is to evaluate the results. This involves comparing the actual results to the desired state and determining whether the problem has been solved.
7	7. The seventh step is to document the process. This involves recording the steps taken to identify and solve the problem, as well as the results of the process.
8	8. The eighth step is to communicate the results. This involves sharing the results of the process with the relevant stakeholders.
9	9. The ninth step is to review the process. This involves reflecting on the process and identifying areas for improvement.
10	10. The tenth step is to implement the improvements. This involves putting the identified improvements into action and monitoring their progress.

Fitness equipment attracts & retains guests who use the facility for exercise. Keeping this equipment up to date is crucial to our facility operations and keeping revenue streams consistent.

Project Description:	<i>This budget will be used for the ongoing replacement of the cardiovascular, stretching circuit and free weight equipment throughout the facility & studios.</i>
----------------------	--

Project Funding Source:	<i>This project is funded by the Rec Fund</i>
-------------------------	---

Project Timeline:	2027 earmarks the first year to start replacing circuit weight machines
-------------------	---

Operating Cost Impact:	No impact
------------------------	-----------

A photograph of a blue and silver gym machine, likely a leg press or similar lower-body exercise equipment, situated in a well-lit gym environment. The machine features a blue padded seat and backrest, and a silver frame. A large silver weight stack is visible on the left side. The background shows other gym equipment and a bright, open space.

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.
2	2. Once a problem is recognized, the next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed.
3	3. The third step is to analyze the problem. This involves identifying the causes of the problem and the factors that contribute to it.
4	4. The fourth step is to develop a solution. This involves identifying the best course of action to address the problem.
5	5. The fifth step is to implement the solution. This involves putting the solution into practice and monitoring its progress.
6	6. The sixth step is to evaluate the solution. This involves assessing the effectiveness of the solution and making any necessary adjustments.
7	7. The seventh step is to communicate the results. This involves sharing the findings of the analysis and the results of the solution with the relevant stakeholders.
8	8. The eighth step is to document the process. This involves recording the steps taken and the results achieved for future reference.
9	9. The ninth step is to review the process. This involves reflecting on the entire process and identifying areas for improvement.
10	10. The tenth step is to conclude the process. This involves finalizing the solution and ensuring that the problem has been resolved.

Fitness equipment attracts & retains guests who use the facility for exercise. Keeping this equipment up to date is crucial to our facility operations and keeping revenue streams consistent.

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem.
2	2. The second step is to gather information about the problem. This involves collecting data and identifying the stakeholders who are affected by the problem.
3	3. The third step is to analyze the information. This involves identifying the key issues and the potential solutions to the problem.
4	4. The fourth step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem.
5	5. The fifth step is to implement the plan. This involves putting the plan into action and monitoring the progress of the solution.
6	6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the solution and identifying any areas for improvement.
7	7. The seventh step is to communicate the results. This involves sharing the findings of the evaluation with the stakeholders and the public.
8	8. The eighth step is to develop a long-term strategy. This involves identifying the steps that need to be taken to prevent the problem from recurring.
9	9. The ninth step is to monitor the progress of the strategy. This involves tracking the progress of the strategy and identifying any areas for improvement.
10	10. The tenth step is to report on the progress of the strategy. This involves sharing the findings of the monitoring process with the stakeholders and the public.

End of life. Weight room & Cardio room are west facing so when the sun is setting it is very bright for users.

Anticipate increased material costs by time of purchase

Project Description:

This budget will be used for the replacement of the commercial washer and dryer. This equipment is used daily to launder towels used by guests to wipe down equipment and also by the custodial company to launder their rags and towels used for cleaning.

Additional Information/Background	
1. Project Overview:	The project aims to develop a sustainable and scalable solution for addressing the growing demand for renewable energy storage, specifically focusing on the integration of solar energy with advanced battery technologies.
2. Objectives:	- Develop a prototype solar energy storage system with a capacity of 100 kWh. - Conduct extensive testing to evaluate the system's efficiency, durability, and safety. - Identify potential commercial applications and market opportunities.
3. Key Deliverables:	- Final project report detailing the design, development, and testing process. - Prototype solar energy storage system. - Comprehensive test results and performance analysis.
4. Timeline:	The project is scheduled to run from January 1st to March 31st, 2024, with a total duration of 12 weeks.
5. Resources:	The project team consists of five members, including two researchers, two engineers, and one project manager. The project is funded by a grant from the National Science Foundation.
6. Risks:	Potential risks include delays in component procurement, unexpected technical challenges, and budget constraints. Mitigation strategies include regular communication, contingency planning, and resource allocation.

This is for replacement of the commercial washer and dryer that was originally purchased in 2016.

How it aligns to Council Priorities:	
Open Space Master Plan	

Additional Information/Background

Project planning consists of good stewardship, promoting best management practices, and enhancing the health and resilience of the COL Open Space portfolio. These plans would continue planning efforts of the Comprehensive Plan and PROS Long Range plan by addressing Open Space topics and needs in more specificity than is possible at higher-level planning efforts. Division specific plans will help staff in effective decision making related to the on-going management of City resources. Implementation & ability to oversee planning efforts will be dependent upon staffing capacity and other project priorities (2027 completion has contingent need for approval of additional PROS Project Supervisor position request)

Project Description:	Grading, maintaining, and repairing the Daughenbaugh and Aquarius parking lots for drainage and increasing the longevity of the quality of the parking lot.
----------------------	---

Project Funding Source:	Funded by the Open Space Fund
-------------------------	-------------------------------

Project Timeline:	2028 and 2030 will be maintaining and repairing the Daughenbaugh and Aquarius parking lots
-------------------	--

Operating Cost Impact:	No impact on operating costs
------------------------	------------------------------

Council Priority Alignment

Safety
How it aligns to Council Priorities:
<i>The goals of this project are to provide a better experience for residents who utilize the OS parking lots</i>

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban farming system that integrates hydroponics, aquaponics, and vertical farming techniques to maximize food production in limited space. 2. Objectives: - Develop a scalable system for growing leafy greens and herbs. - Integrate a fish-based system (aquaponics) to provide natural fertilization. - Optimize water usage through recirculation and filtration. - Implement vertical farming to increase yield per square foot. 3. Key Challenges: - Space constraints in the urban environment. - Initial high capital costs for equipment and infrastructure. - Ensuring consistent water and nutrient levels across multiple levels. - Managing potential disease and pest issues in a controlled environment. 4. Stakeholders: - Local community members interested in urban agriculture. - Local government for permits and regulations. - Local businesses for potential distribution channels. - Academic institutions for research and expertise. 5. Timeline: - Phase 1: Design and Planning (Months 1-3) - Phase 2: Construction and Setup (Months 4-6) - Phase 3: Testing and Optimization (Months 7-9) - Phase 4: Full-scale Operation and Monitoring (Months 10-12) 6. Budget: - Equipment (hydroponic systems, grow lights, filtration): \$15,000 - Infrastructure (space rental, utilities): \$10,000 - Initial stock of plants and fish: \$2,000 - Operational costs (water, electricity, nutrients): \$5,000 - Contingency fund: \$3,000 Total Budget: \$35,000 7. Expected Outcomes: - Production of 1,000 lbs of leafy greens and herbs annually. - Production of 500 lbs of fish (e.g., tilapia) annually. - Reduction in water usage by 50% compared to traditional farming. - Creation of 10 jobs in the urban farming sector. 8. Risks and Mitigation: Technical Risks: System malfunctions or equipment failure. Mitigation: Regular maintenance and backup systems. Financial Risks: Budget overruns. Mitigation: Strict budgeting and transparent reporting. Operational Risks: Inconsistent yields or quality. Mitigation: Continuous monitoring and adjustment of system parameters. Market Risks: Lack of demand for locally grown produce. Mitigation: Establishing local distribution networks and marketing strategies. 9. Conclusion: This project represents a significant step towards sustainable urban food production. By integrating advanced farming techniques, we aim to create a resilient and efficient system that can serve as a model for other urban farming initiatives.	10. Appendix A: System Diagrams - Hydroponic System Layout - Aquaponic System Integration - Vertical Farming Stack Design 11. Appendix B: Detailed Budget Breakdown - Equipment Costs: \$15,000 - Infrastructure Costs: \$10,000 - Initial Stock: \$2,000 - Operational Costs: \$5,000 - Contingency: \$3,000 12. Appendix C: Project Schedule Gantt Chart - Phase 1: Design and Planning (Months 1-3) - Phase 2: Construction and Setup (Months 4-6) - Phase 3: Testing and Optimization (Months 7-9) - Phase 4: Full-scale Operation and Monitoring (Months 10-12) 13. Appendix D: Stakeholder Contact Information - Local Government: [Contact Info] - Local Businesses: [Contact Info] - Academic Institutions: [Contact Info] 14. Appendix E: Glossary of Terms Hydroponics: A method of growing plants without soil, using mineral nutrient solutions in a water solvent. Aquaponics: A system that combines aquaculture (raising fish) and hydroponics (growing plants without soil) in a symbiotic environment. Vertical Farming: A method of growing crops in vertically stacked layers, often indoors, using artificial light.

The goals are to refurbish the existing parking lots to a state of quality and convenience for people who use and frequent them. The projects meet the objectives of the "Maintenance & Management" Sub Program in that it is consistent with good stewardship and enhance passive recreation experiences.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

Replace multiple Rules & Regulatory entry signs (small); replacement of existing property signs (large) due to weathering at Davidson Mesa, Harper, Aquarius, Daughenbaugh; Interpretive signs: Davidson Mesa (update/replace two signs), Harper Lake (update/replace two signs); Aquarius (Create, fabricate one new sign). Add a new Native American sign: create, fabricate, and install one sign on a pedestal (location TBD).

Project Funding Source:

Funded by the Open Space Fund

Project Timeline:

In 2027 replace weathered Rules & Regs signs. In 2028 replace weathered Large property signs. 2029 replace weathered kisok signs; 2030 create new Inter panel signs.

Operating Cost Impact:

No impact to operating budget

Image

Council Priority Alignment

Image

The left image shows a small tractor with a trailer attached, parked on a grassy field. The right image shows a person operating a small tractor with a front loader, moving a large pile of hay or straw in a field.

Council Priority Alignment	
Core Services	
How it aligns to Council Priorities:	
By maintaining open space residents will have a greater experience in City Open Space	

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem.
2	2. The second step is to gather information about the problem. This involves collecting data and identifying the stakeholders who are affected by the problem.
3	3. The third step is to analyze the information. This involves identifying the key issues and the potential solutions to the problem.
4	4. The fourth step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and the resources that will be needed.
5	5. The fifth step is to implement the plan. This involves putting the plan into action and monitoring the progress of the solution.
6	6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the solution and identifying any areas for improvement.
7	7. The seventh step is to communicate the results. This involves sharing the findings of the evaluation with the stakeholders and the public.
8	8. The eighth step is to develop a long-term strategy. This involves identifying the steps that need to be taken to prevent the problem from recurring.
9	9. The ninth step is to monitor the progress. This involves tracking the progress of the solution and identifying any areas for improvement.
10	10. The tenth step is to report the results. This involves providing a final report on the solution and the progress made.

Meets the objectives of the "Maintenance & Management" Sub Program in that the equipment will aid staff in general system maintenance and natural resource work that is consistent with good land stewardship and enhances passive recreation experiences. Equipment will increase efficiency and effectiveness of staff and alleviate need to hire outside contractors to perform tasks solely because equipment is not available to perform certain tasks.

Project Description:	Routine trail maintenance and design for aging soft surface trail systems. Trails will be more compact decreasing seasonal erosion issues, enhancing safety, and creating an enjoyable experience for trail users. Projects as follows: Hecla (anticipated carryforward approved funding from 2025-2026 budget w/ completion in 2027); Aquarius; CTC/CCT to Aspen Way; Dutch Creek to Augusta Lane; Warembourg/Daughenbaugh; Dillon Underpass to US-36 underpass; Davidson Mesa.
----------------------	--

Project Funding Source:	Funded by the Open Space Fund
-------------------------	-------------------------------

Project Timeline:	2032 Davidson Mesa
-------------------	--------------------

Operating Cost Impact:	No Impact
------------------------	-----------

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>The trails at these locations are in need of maintenance to provide safe and enjoyable experience for all trail users.</i>

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem.
2	2. The second step is to gather information about the problem. This involves collecting data and identifying the stakeholders who are affected by the problem.
3	3. The third step is to analyze the information. This involves identifying the key issues and the potential solutions to the problem.
4	4. The fourth step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem.
5	5. The fifth step is to implement the plan. This involves putting the plan into action and monitoring the progress.
6	6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the plan and making adjustments as needed.
7	7. The seventh step is to communicate the results. This involves sharing the findings with the stakeholders and the public.
8	8. The eighth step is to document the process. This involves creating a record of the steps that were taken and the results that were achieved.
9	9. The ninth step is to review the process. This involves reflecting on the experience and identifying lessons learned.
10	10. The tenth step is to share the results. This involves disseminating the findings to the wider community.

This project aligns with the objectives of the "New Trails & Trail Maintenance" Sub Program by maintaining all trails to a satisfactory level to encourage recreation and to enable safe walking, running, and biking experiences in Louisville. This project also aligns with the "Maintenance and Management" Sub Program by providing appropriate passive recreation opportunities.

Development of a Property Plan to determine necessary improvements at the Warembourg fishing pond for water retention, storm water conveyance, water rights issues, aquatic habitat, fishing/nature experiences, & other passive recreational opportunities such as seating, shade, parking, vault restroom, etc. Construction costs include dredging & removal of sediment on the pond floor and relining.

Funded by the Open Space Fund

Planning phase will take place in 2028 and in 2029 construcion will start

No impact to operating budget

An aerial photograph of a pond with a dark, irregular shape. The pond is surrounded by a light-colored path or road. Several green circles are placed along the left and top edges of the pond, and several yellow squares are placed along the right and bottom edges. A red arrow points to a yellow square on the right side of the pond. The text 'Pond 1' is visible in the bottom right corner of the image.

This will help create a better open space experience for residents and promote environmental sustainability, especially for wildlife habitat. As well as provide better accessibility to the property and its popular features

Construction of improvements meets the objectives of the "Maintenance & Management" sub program as the project is consistent with good stewardship, promotes wildlife habitat, and enhances passive recreation experiences such as fishing. Meets the objectives of the "Education & Outreach" sub program.

Council Priority Alignment

Safety
How it aligns to Council Priorities:
<i>Provides safe passage to city facilities</i>

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.
2	2. Once a problem is recognized, the next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed.
3	3. The third step is to analyze the problem. This involves identifying the causes of the problem and the factors that contribute to its persistence.
4	4. The fourth step is to develop a solution. This involves identifying potential solutions and evaluating them based on their feasibility and effectiveness.
5	5. The fifth step is to implement the solution. This involves putting the chosen solution into practice and monitoring its progress.
6	6. The sixth step is to evaluate the results. This involves assessing the impact of the solution and determining whether it has successfully addressed the problem.
7	7. The seventh step is to communicate the results. This involves sharing the findings of the evaluation with relevant stakeholders.
8	8. The eighth step is to reflect on the process. This involves considering what was learned from the experience and how it can be applied to future problems.
9	9. The ninth step is to document the process. This involves creating a record of the steps taken and the results achieved.
10	10. The tenth step is to review the process. This involves periodically reviewing the process to ensure it remains effective and efficient.

The city currently faces significant challenges with its access control systems. There are three outdated systems in use: Alarm Lock, Schlage, and Continental scattered throughout various locations. Due to their outdated nature, these systems often fail to connect to the network, resulting in issues with building access, difficulty in changing door codes, and managing door schedules. Because of these outdated systems, the city is facing serious security concerns. There are very few vendors that can work on our system and because our system is so outdated many times the vendors that can work on the systems can only do limited troubleshooting. The objective of this project is to strengthen safety and security within our organization and mitigate risks associated with unauthorized access.

Council Priority Alignment	
Select One	
How it aligns to Council Priorities:	
Maintaining a secure and connected network ensuring all users have appropriate technological resources to effectively perform their jobs	

Additional Information/Background

UPS is a device that provides emergency power to connected equipment in the event of a power outage or disruption. These provide backup power to our servers, networking equipment, and other sensitive devices in our data center and IT rooms throughout the city. UPS plays a critical role in ensuring the availability, reliability and safety of the City IT equipment. These devices are end of life and should be replaced. The IT Staff's sub-program goal is to maintain a secure and connected network ensuring all users have appropriate technological resources to effectively perform their jobs.

If Project Costs have changed from the previous CIP, please explain:

Due to rising cost from AI for servers we will need to increase this cost. Cost for servers have not stabilized yet, but we will plan to double the budget for these for now until we know more.

Project Description:

Upgrade and modernize the city's surveillance system by replacing outdated cameras and rightsizing the milestone servers for storing and streaming live footage. This initiative focuses solely on the replacement of existing servers, and does not include any new cameras.

Project Funding Source:

Funded by the Capital Fund

Project Timeline:

Project is Planned for 2027

Operating Cost Impact:

No impact to operating cost

Image

Council Priority Alignment

Safety

How it aligns to Council Priorities:

Upgrading city surveillance provides safety to city staff and residents.

Additional Information/Background

The city has approximately 30 cameras and 2 milestone servers that have reached end of life and require replacement. Failure to upgrade our infrastructure will result in camera malfunctions and inadequate storage capacity on the servers. Presently, the servers are insufficient in size. It is imperative that we replace and rightsize the servers to accommodate additional cameras and comply with our footage retention standards. This proactive approach will ensure the reliability and effectiveness of our surveillance system going forward. IT Staff's sub-program goals are to maintain a secure and connected network ensuring all users have appropriate technological resources to effectively perform their jobs.

If Project Costs have changed from the previous CIP, please explain:

Original pricing for this project was created from 2023 discounted pricing. Due to fluctuations in technology hardware cost we are budgeting less discounts than we anticipated. we also added additional years for 2031 and 2032. It is advised to replace switches every 7 years.

Project Description:

Replacing aging Gen 2 extreme switches at least 25 switches would be replaced.

Project Funding Source:

Project will be funded by the Capital Projects Fund

Project Timeline:

Replacements will start in 2028 and will end in 2029

Operating Cost Impact:

This project will not impact operating budget

Image	

Council Priority Alignment	
Core Services	
How it aligns to Council Priorities:	<i>This project will maintain a secure and connected network ensuring all users have appropriate technological resources which allows them to effectively perform their jobs.</i>

Additional Information/Background

Once switches get beyond about 7 years old the chances for failure and downtime significantly increase. These switches would be around 8 years old at this point. They will also be nearing end of support by extreme around this time. Lifetime warranty only lasts as long as extreme has stock to replace a failed unit. If these are end of support, it can be questionable to get a replacement. Potentially extending any outages. IT Staff's sub-program goal is to maintain a secure and connected network ensuring all users have appropriate technological resources to effectively perform their jobs.

If Project Costs have changed from the previous CIP, please explain:

The cost has increased significantly due to a combination of global supply chain challenges, inflation in technology hardware, and major price increases from manufacturers due to AI data centers and data intensive workloads. Our previous purchase of very similar models was 175,000 in 2023 and quoting this same cluster in 2026 is roughly 1,000,000. We hope to identify better options like purchasing the hardware in a refurbished state but it will still be significantly more in cost than in 2023. Additionally, we have reviewed cloud hosting,

Project Description:

This will replace the production Dell servers and storage with 4 new dell servers running Vmware VSAN. It will also purchase additional Microsoft Server Datacenter core licenses for the new servers. Current production servers will be moved into a disaster recovery and business continuity position and then those servers will be replaced in 2031

Project Funding Source:

This project is funded by the capital projects fund

Project Timeline:

Servers will be replaced every 3 years

Operating Cost Impact:

No impact to operating expenses

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Explain how the project aligns with the Strategic Work Plan through the lens of EDI, and or environmental sustainability.

Additional Information/Background

Production server hardware is the heart of IT services and runs all critical applications and operations. Staff refreshes production servers every 3 years and moves the current production servers into a backup position for redundancy. IT Staff's sub-program goals are to maintain a secure and connected network ensuring all users have appropriate technological resources to effectively perform their jobs.

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project aligns with Councils priority to support core services by maintaining building systems and structures.

Additional Information/Background	
1. Project Overview:	The project aims to develop a comprehensive framework for assessing the environmental impact of urban development projects. This framework will be used by city planners and environmental agencies to make informed decisions about project approvals and mitigation measures.
2. Objectives:	- Develop a standardized set of criteria for assessing environmental impacts. - Create a user-friendly assessment tool that can be used by non-experts. - Conduct pilot studies to validate the framework's effectiveness. - Provide training and support to city planners and environmental agencies.
3. Scope:	The project will focus on the assessment of environmental impacts related to land use changes, transportation infrastructure, and resource consumption. It will not cover the assessment of social or economic impacts.
4. Timeline:	The project is scheduled to start in January 2024 and will be completed by December 2025. Key milestones include the completion of the framework development by June 2024, the start of pilot studies in September 2024, and the final report submission by December 2025.
5. Budget:	The total budget for the project is \$500,000. This includes personnel costs, materials, travel, and other overheads. A detailed budget breakdown is provided in the attached document.
6. Risks:	Key risks include the potential for delays in the development of the framework, the availability of data for the pilot studies, and the acceptance of the framework by city planners and environmental agencies. Mitigation strategies are being developed to address these risks.
7. Stakeholders:	The project involves several stakeholders, including city planners, environmental agencies, and the general public. Regular communication and collaboration are essential for the success of the project.
8. Conclusion:	The project is a critical initiative for improving the environmental assessment process in urban development. By developing a standardized framework, we can ensure that all projects are evaluated consistently and that the most sustainable options are chosen.

The Cabinets in the City Services breakroom are 11 yrs old and have water damage at some areas and the veneer is peeling off. New Breakroom Cabinets and interior paint will improve the building's interior's look and feel.

If Project Costs have changed from the previous CIP, please explain:	<i>Revised to include modernization. Old CIP was for 20 yr maintenance, but after an assessment, parts for this unit are becoming obsolete and are hard to find.</i>
---	---

Project Description:	<i>The components inside the elevator shaft are corroded and need to be replaced. The elevator was installed in 2004 and is recommended to be modernized. This will include new cab, hydraulics, lighting and components. Some controllers in the main panel are obsolete and may not be found when needed.</i>
----------------------	---

Project Funding Source:	Funded by the Capital Fund
-------------------------	----------------------------

Project Timeline:	Funds are being requested in 2027 to maintain the elevator pit components. Expected modernization completion in 2029.
-------------------	---

Operating Cost Impact:	Modernization will come with a warranty and will decrease the amount of maintenance and service calls.
------------------------	--

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining building systems and structures and meets ADA requirements.</i>

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem.
2	2. The second step is to gather information about the problem. This involves researching the problem and identifying the resources that are available to solve it.
3	3. The third step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and the resources that will be needed to implement the plan.
4	4. The fourth step is to implement the plan. This involves putting the plan into action and monitoring the progress of the solution.
5	5. The fifth step is to evaluate the results. This involves assessing the effectiveness of the solution and identifying any areas for improvement.

The elevator will be 22yrs old in 2026 and should be modernized to ensure parts are available when service calls are needed. This elevator is the least utilized in the City and with a little maintenance in 2027, should extend its useful life .

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining building systems and structures.</i>

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban farming system that integrates hydroponics, aquaponics, and vertical farming techniques to maximize food production in limited space. 2. Objectives: - Develop a scalable system for growing leafy greens and herbs. - Integrate a fish-based system (aquaponics) to provide natural fertilization. - Optimize water usage through recirculation and filtration. - Implement vertical farming to increase yield per square foot. 3. Key Challenges: - Space constraints in the urban environment. - Initial high capital costs for equipment and infrastructure. - Ensuring consistent water quality and system stability. - Managing the integration of different farming technologies. 4. Expected Outcomes: - Increased local food production and food security. - Reduced water consumption compared to traditional agriculture. - Year-round production of fresh produce. - Creation of a community hub for education and engagement. 5. Timeline: - Phase 1: Design and Planning (Months 1-3) - Phase 2: Construction and Setup (Months 4-6) - Phase 3: Testing and Optimization (Months 7-9) - Phase 4: Full-scale Operation and Monitoring (Months 10-12) 6. Resources: - Expertise in hydroponics, aquaponics, and vertical farming. - Access to urban space and infrastructure. - Initial funding for equipment and materials. - Community support and volunteer network.	7. Stakeholders: - Local government and urban planning department. - Community members and local businesses. - Academic institutions and research organizations. - Non-profit organizations focused on food security. 8. Risks: - Technical issues with system components. - Fluctuations in water quality and system performance. - Unstable funding or community support. - Competition from established commercial farms. 9. Conclusion: This project represents a significant step towards sustainable urban food production. By integrating advanced farming techniques, we aim to create a resilient and efficient system that can serve as a model for other urban environments.

The Paint and Carpet were last completed in 2014. The building is a 24/7 facility and is a high-traffic area. Replacing carpet and paint with more modern finishes would update the interior of the building and provide a better work environment. The Steel carport structure has not been refreshed since construction and should be repainted to protect the steel from the elements.

If Project Costs have changed from the previous CIP, please explain:

This updated CIP request represents an increase in the number of previously requested vehicles from 3 to 5 per year. The intent is to address the fleet replacement needs that currently exist at the police department. The professional services component represents the costs associated with equipping and upfitting of police vehicles. Costs for vehicles and upfitting have significantly increased over the last 6 years, are anticipated to continue this trend.

Project Description:

This project will allow for the purchase and outfitting of 5 police vehicles per year, and establish a funding source for the required replacement of police vehicles to ensure a proper and functional fleet. The availability of vehicles and emergency equipment was significantly impacted between 2020-2022 creating supply shortages and increased costs. Significantly increased timelines and delays in acquiring equipment as well as a lack of upfitting vendor availability have complicated this

Project Funding Source:

Funded by the Capital Fund- Vehicle

Project Timeline:

This will be an on going replacement program for the next several years through 2032.

Operating Cost Impact:

These vehicles are replacements and will not increase operating budget, but vehicles are subject to market conditions and fuel costs that may require increases in those budgets. The shift to an electric fleet may also require additional charging stations, to include a rapid chargeType III station at the police building.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project seeks to address the agency's need to provide basic community patrol and police response capabilities. The project supports public safety in the community through visible patrol and incident response. The project also supports sustainability efforts by integrating Electric Vehicles into the department's fleet, when appropriate.

Additional Information/Background

This project seeks to address the agency's need to provide basic community patrol and police response capabilities. The police vehicle fleet currently consists of 37 vehicles, 13 of which will have exceeded their service life based on age and mileage in 2026. Patrol vehicles have much higher usage than other vehicles and the City's fleet replacement guidelines recommend replacement of patrol vehicles every 4 years while administrative employee vehicles are recommended for replacement every 12 years before they exceed their usable lifespan. It is at this point the cost of ownership and maintenance typically surpasses value. Over the next several years all vehicles in the fleet are subject to rotational replacement and this plan seeks to address the department's vehicle needs for years to come. The plan also allows for supporting the City's sustainability efforts to electrify its fleet by integrating electric vehicles into the police department's operations, where possible.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

There are multiple options for traffic calming, many of which have already been implemented in the city, including asphalt speed cushions and raised crosswalks. This funding will allow for wider implementation of traffic calming at problem areas throughout the city. Over the last year, many requests have come in from residents and other areas identified by staff to further study for implementation of traffic calming.

Project Funding Source:

Funded by the Capital Fund

Project Timeline:

This is an on going project

Operating Cost Impact:

There will be no impact to operating cost

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project works towards strategic plan goals including reliable core service and cyclist / pedestrian safety.

Additional Information/Background

This project is needed to address speeding issues and pedestrian safety by the use of proven traffic calming measures. Having a specific budget for these projects will allow for wider implementation of traffic calming measures at problem areas throughout the city. This project meets works towards strategic plan goals, including reliable core services and quality programs and amenities.

The project includes replacement of curb, gutter, walk, as well as improving the surface condition of asphalt pavements by utilizing a variety of maintenance techniques. Streets that exhibit signs of minor surface failure are crack sealed, patched, leveled, and resurfaced with an overlay. Streets that exhibit severe signs of deterioration are reconstructed. Marshall Fire impacted roads are included.

Funded by the Capital Fund

This is an on-going project

No impact

Core Services
How it aligns to Council Priorities: <i>Maintaining the city's infrastructure is consistent with a City Council goal of addressing aging infrastructure</i>

This project is needed for maintenance of 200 lane miles of the city's pavement infrastructure. Maintaining the city's infrastructure is consistent with a City Council goal of addressing aging infrastructure. This project supports compliance with the city's desired PCI level of 75.

If Project Costs have changed from the previous CIP, please explain:

Costs identified in 2029 did not include inflation, and remained constant from 2028. Costs have been updated to included inflation adjustment.

Project Description:

This project includes the removal and replacement of curb, gutter, walk, cross-pans, and ramps at intersection corners to provide safe pedestrian walks and repair street concrete that detrimentally impacts pavement life. Settlement, heave, cracks, spalling, and ponding are typical distresses that staff evaluates to rank items for replacement.

Council Priority Alignment

Safety

How it aligns to Council Priorities:

Project will provide a safe walking area and reduce potential pavement failure

Additional Information/Background

Project will provide safe walks and reduce potential pavement failure caused by the infiltration of water into the pavement subgrade. Maintaining the City's infrastructure is consistent with a City Council goal of addressing aging infrastructure.

If Project Costs have changed from the previous CIP, please explain: *2027 budget is based on the existing 2026 budget amendment. In 2029 a new RFP will be issued and accounts for inflation escalation*

Project Description:	<i>The City's traffic signals require routine maintenance as well as additional larger replacements of hardware and technology to maintain vehicle and pedestrian safety at intersections. The City's signal infrastructure needs to be brought up to recently adopted PROWAG standards to improve safety and accessibility for all users.</i>
-----------------------------	--

The project will be funded by the Capital fund

	Annual maintenance
--	--------------------

	No impact
--	-----------

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>The new technology will allow for more efficient and safe operations of the traffic signals in Louisville</i>

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban infrastructure plan for a new city, focusing on green spaces, public transportation, and affordable housing. 2. Key Objectives: - Develop a comprehensive urban planning framework. - Integrate sustainable design principles throughout the project. - Engage the community in the planning process. 3. Timeline: The project is scheduled to start in Q1 2024 and is expected to be completed by Q4 2025. 4. Budget: The total budget for the project is estimated at \$1.2 million. 5. Stakeholders: The project involves collaboration with local government, private developers, and community organizations.	6. Risks: - Delays in securing necessary permits. - Changes in local government priorities. - Unforeseen increases in material costs. 7. Next Steps: - Finalize the project charter. - Identify and assign team members. - Begin initial community consultations.

The new technology will allow for more efficient and safe operations of the traffic signals in Louisville. Efficient signals help improve air quality through less vehicles idling at intersections.

Project Description:	<i>This project will maintain lane line pavement markings by establishing a biannual contract for application of epoxy pavement marking paint and thermoplastic markings. Pavement marking contractors have the equipment and trained staff to accomplish this project most efficiently and at a lower cost. Operations staff will continue to maintain stop bars, crosswalks, and lane symbols on local and collector streets</i>

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>Maintaining the city's infrastructure is consistent with a City Council goal of addressing aging infrastructure</i>

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.
2	2. Once a problem is recognized, the next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed.
3	3. The third step is to analyze the problem. This involves identifying the causes of the problem and determining the scope of the problem.
4	4. The fourth step is to develop a solution. This involves identifying potential solutions and evaluating them based on their feasibility and effectiveness.
5	5. The fifth step is to implement the solution. This involves putting the chosen solution into action and monitoring its progress.
6	6. The sixth step is to evaluate the results. This involves comparing the actual results to the desired state and determining whether the problem has been solved.
7	7. The seventh step is to document the process. This involves recording the steps taken to identify and solve the problem, as well as the results of the process.
8	8. The eighth step is to communicate the results. This involves sharing the results of the process with the relevant stakeholders.
9	9. The ninth step is to review the process. This involves reflecting on the process and identifying areas for improvement.
10	10. The tenth step is to implement the improvements. This involves putting the identified improvements into action and monitoring their progress.

This project is needed for maintenance of 22 miles of the city's pavement markings. Maintaining the city's infrastructure is consistent with a City Council goal of addressing aging infrastructure.

If Project Costs have changed from the previous CIP, please explain:

Additional \$12,000 was requested and the request is being moved up from 2028 to 2027 because of inability to procure parts for existing school zone flashers as well as rising cost of materials to replace.

Project Description:

Replacement school zone flashing beacons for all BVSD schools within Louisville.

Project Funding Source:

Funded by the Capital Fund	
----------------------------	--

Project Timeline:

Replacement should be able to conclude in the summer of 2027 to ensure no negative effect on any school zones.

Operating Cost Impact:

There will be no impact on operating costs.

Council Priority Alignment	
Safety	
How it aligns to Council Priorities:	

Additional Information/Background

The current school zone flashing beacons consist of an RTC-AP21 controller (10), RTC-AP22 controller (3) or Applied Information controller (2). The RTC-AT21 and RTC-AP22 controllers are outdated and parts can no longer be purchased to maintain these units. Both of the manual RTC-AP control types have to be manually set for turn on and off times at the control box. The Applied Information controllers are programmable from a computer with a larger memory to accommodate the entire school year as well as back up batteries and notifications to maintain programming and notify a technician of issues before they should be activated.

Council Priority Alignment

Core Services
How it aligns to Council Priorities:

Additional Information/Background	
1. Project Overview:	The project aims to develop a sustainable urban infrastructure plan for a new city, focusing on green spaces, public transportation, and affordable housing.
2. Key Objectives:	- Develop a comprehensive urban planning framework. - Integrate sustainable design principles throughout the project. - Ensure the project is financially viable and socially equitable.
3. Stakeholders:	The project involves multiple stakeholders, including local government, private developers, community groups, and academic institutions.
4. Timeline:	The project is scheduled to begin in Q3 2024 and is expected to be completed by Q4 2026, with a total duration of 30 months.
5. Budget:	The estimated budget for the project is \$1.2 million, covering all phases from planning to implementation.
6. Risks:	Key risks include potential delays in securing funding, changes in local government priorities, and unforeseen environmental challenges.
7. Next Steps:	The next steps involve finalizing the project charter, securing initial funding, and establishing a steering committee.

This Vehicle will replace unit # 3424, a 2013 International truck that will meet the age requirement for replacement in 2028. The replacement unit will be used for snow plowing, maintenance of City water, sanitary sewer, storm water, and general use hauling. The new unit will be a tandem truck that will give the Operations Division the ability to haul more material to and from jobsites cutting down time spent at the worksites. A winged snow removal attachment will be added to the new unit, which can double the amount of roads cleared by a conventional snowplow making the snowplowing operations more efficient.

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban farming system that integrates hydroponics, aquaponics, and vertical farming techniques to maximize food production in limited space. 2. Objectives: - Develop a scalable system for growing leafy greens and herbs. - Implement water recycling and filtration systems to reduce consumption. - Engage the community through workshops and educational programs. 3. Key Challenges: - Space constraints in the urban environment. - Initial high setup costs for equipment and infrastructure. - Ensuring consistent water quality and system maintenance. 4. Expected Outcomes: - Increased local food production and food security. - Reduction in water usage compared to traditional agriculture. - Creation of green jobs and community engagement opportunities. 5. Timeline: - Phase 1: Planning and Design (Months 1-3) - Phase 2: Construction and Setup (Months 4-6) - Phase 3: Testing and Optimization (Months 7-9) - Phase 4: Community Engagement and Launch (Months 10-12) 6. Budget: - Equipment (Hydroponic systems, pumps, filters): \$15,000 - Infrastructure (Structures, lighting, water supply): \$10,000 - Personnel (Staff, consultants): \$8,000 - Community Programs (Workshops, materials): \$3,000 - Contingency: \$2,000 Total Budget: \$38,000 7. Risk Assessment: Technical Risks: Potential system malfunctions or inefficiencies. Mitigation: Regular maintenance and expert consultation. Financial Risks: Budget overruns or delayed funding. Mitigation: Detailed budgeting and secure funding sources. Operational Risks: Inconsistent crop yields or pest/disease outbreaks. Mitigation: Strict hygiene protocols and expert advice. Community Risks: Lack of interest or participation. Mitigation: Proactive outreach and transparent communication. 8. Conclusion: This project represents a significant step towards sustainable urban food production. By leveraging innovative technologies and community support, we aim to create a model for future urban farming initiatives.	9. References: - Smith, J. Unit #3260 is a 2019 Tymco Street Sweeper used by the Operations Division to maintain 263 lane miles biannually and to sweep major and collector roads for cleanliness throughout the year. The replacement of this unit was evaluated for a potential transition to an electric model. After reviewing the anticipated duty cycle, typical operational usage, and total cost of ownership, it was determined that proceeding with a diesel-powered unit is the most practical and fiscally responsible option at this time. The electric model carried an estimated purchase price of approximately \$1,000,000, exclusive of any required charging infrastructure or associated electrical upgrades. In comparison, the diesel replacement unit is estimated at approximately \$450,000, representing a substantially lower initial capital investment while meeting operational requirements. In the year prior to the scheduled replacement, available grant opportunities will be evaluated to determine whether external funding could support a transition to an electric model.

Additional \$15,000 requested as prices rise for vehicles and products, a similar vehicle was purchased in 2025 for aproximatly \$86,000.00

Project Description:

This CIP is for the purchase of a replacement F550 or equivalent Snow Plow/Streets dump truck.

Project Funding Source:

Project will be funded by the Capital Projects Fund

Project Timeline:

This vehicle will be purchased in 2028.

Operating Cost Impact:

There will be no impact on operating costs.

Additional Information/Background

Unit #3409 is a 2015 Chevy Silverado 2500 that is used for various utility tasks; this is also the only vehicle that is equipped with a gooseneck hitch to transport the trailer transporting the downtown patio railings. The current vehicle has been fitted with aftermarket rear suspension to assist with the heavy weight of the trailer, for that reason the existing unit will be replaced with a 3500 pickup. This budget also includes for a plow and salt spreader attachments to assist with snow plowing and ice mitigation in neighborhoods.

Project Description:	Purchase of a replacement floor cleaning unit for the City Services fleet services area.
----------------------	--

Project Funding Source:	Funded by the Capital Fund
-------------------------	----------------------------

Project Timeline:	Unit will be purchased in 2028
-------------------	--------------------------------

Operating Cost Impact:	No Impact
------------------------	-----------

Council Priority Alignment	
Select One	
How it aligns to Council Priorities:	

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban infrastructure plan for a new city, focusing on green spaces, public transportation, and affordable housing. 2. Key Objectives: - Develop a comprehensive urban planning framework. - Integrate sustainable design principles throughout the project. - Engage the community in the planning process. 3. Timeline: The project is scheduled to start in Q1 2024 and is expected to be completed by Q4 2025. 4. Budget: The total budget for the project is estimated at \$1.5 million. 5. Stakeholders: The project involves collaboration with local government, private developers, and community organizations.	6. Risks: - Delays in securing necessary permits. - Changes in local government priorities. - Unforeseen increases in material costs. 7. Next Steps: - Finalize the project charter. - Identify and assign team members. - Begin initial community consultations.

The current floor cleaning unit is a 2016 Sanitaire that has recently developed numerous problems with the electrical system including the charging system. This unit does not have a local option for service or parts. The replacement would be selected from a local sales / service location to maintain longevity of the unit.

Project Description:

Project Funding Source:

Funded by the Capital Fund

Project Timeline:

Expect all controllers and existing infrastructure upgraded by 2032. Future requests will be to maintain and replace based upon asset management software controls and depreciation schedules

Operating Cost Impact:

This should reduce operating costs as new equipment will require less staff time for repair and troubleshooting.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports maintenance of existing assets and infrastructure

Additional Information/Background

Upgrade irrigation infrastructure and equipment to achieve improved water management capabilities for parks, streetscapes and cemetery properties. Improvements will focus on installation of new controllers (112 total) with remote monitoring/adjustment capabilities and replacement of mainline, lateral, pump and associated equipment as needed. □

Project Description:

Renovations to landscape medians to eliminate non-functional turf, diversity tree canopy and replace aging infrastructure

Project Funding Source:

Funded by the Capital Projects Fund

Project Timeline:

Current funding is intended to continue work on McCaslin Blvd corridor in 2027. Future requests will focus on the South Boulder Rd. corridor in funded years and/or the following year as seasonal construction windows apply.

Operating Cost Impact:

Increase demand will be placed on operations as new medians require more hands-on maintenance than bluegrass turf.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports maintenance of existing assets and pursuit of environmental sustainability efforts focused on reduced water use.

Additional Information/Background

PPLAB continuous advisement on median renovations until inventory has been upgraded supporting more sustainable median landscaping. Future considerations with new design for South Boulder Road (2029 & 2030) and updates to Via Appia, Dillon and Cherry (2031-out year).

Project Description:

Upgrade the Splash Pad and Playground at Community Park. Possible combination of project funds with on-going Playground Replacement budget allocations.

Project Funding Source:

Funded by the Capital Fund

Project Timeline:

The project should initiate in the year funded, with construction likely being completed the following year.

Operating Cost Impact:

No impact to operating costs

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Upgrading the splash pad and playground at Community Park directly supports City Council's Core Services work plan by reinvesting in critical park infrastructure and maintaining high-quality recreational amenities for the community. These improvements enhance public safety, accessibility, and the overall user experience while extending the life and functionality of heavily used park assets. Continued investment in these facilities demonstrates a commitment to sustainable asset management and preserving community spaces that serve residents of all ages.

Additional Information/Background

Request was previously submitted in 2019 and repairs/replacements are needed to equipment dating back to original park construction (2005).

If Project Costs have changed from the previous CIP, please explain:

Project Description:

Refinish wood floor in Jacoe Store, paint and seal flooring in Tomeo House and paint interior of all 3 houses. New parking lot lighting in the alley.

Project Funding Source:

Funded by the Capital Fund

Project Timeline:

Q2 2027

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project aligns with Councils priority to support core services by maintaining building systems and structures.

Additional Information/Background

Interior of the (3) houses have not been painted for over 10 yrs and need a refresh, the flooring in all 3 buildings are high-traffic areas, and refinishing and sealing will prolong the life of the floor.

Project Description:	Retro commissioning of snow melt system - 20 yr PM
----------------------	--

Project Funding Source:	Funded by the Capital Fund
-------------------------	----------------------------

Project Timeline:	Completed in 2028 before the heating season.
-------------------	--

Operating Cost Impact:	<i>Retro Commissioning will decrease the amount of maintenance and service calls.</i>
------------------------	---

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining building systems and structures.</i>

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.
2	2. Once a problem is recognized, the next step is to define the problem. This involves identifying the specific aspects of the problem that need to be addressed.
3	3. The third step is to analyze the problem. This involves identifying the causes of the problem and determining the scope of the problem.
4	4. The fourth step is to develop a solution. This involves identifying potential solutions and evaluating them based on their feasibility and effectiveness.
5	5. The fifth step is to implement the solution. This involves putting the chosen solution into action and monitoring its progress.
6	6. The sixth step is to evaluate the results. This involves comparing the actual results to the desired state and determining whether the problem has been solved.
7	7. The seventh step is to document the process. This involves recording the steps taken to identify and solve the problem, as well as the results of the process.
8	8. The eighth step is to communicate the results. This involves sharing the results of the process with the relevant stakeholders.
9	9. The ninth step is to review the process. This involves reflecting on the process and identifying areas for improvement.
10	10. The tenth step is to implement the improvements. This involves putting the identified improvements into action and monitoring their progress.

The boiler for the snow melt system will be 20yrs old in 2026. Funds are being requested to re-commission the boiler and associated piping/components at 20yrs.

If Project Costs have changed from the previous CIP, please explain:

Removed unsecured grant funding and updated scope to prioritize electrification. This project will leave the facility hybrid electrified with gas heating during coldest days. Budget is for identified near term scope only, and there may be additional long term scope (energy efficiencies, etc.) that may require funding. These changes are part of a reprioritization of decarbonization funding and partly due to changes in the federal grant funding landscape.

Project Description:

Electrification of gas powered equipment and electrical upgrades as needed.

Project Funding Source:

Funded by the Water Fund. Grants will be applied once final scope items are defined through the design phase.

Project Timeline:

Design anticipated to occur in 2029, and construction to occur in 2030 to be included within this 6-year CIP request. Project timeline is flexible and can be adjusted as needed.

Operating Cost Impact:

Energy cost savings are expected after implementation, but this value cannot yet be quantified.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This scope aligns with the City's Decarbonization Plan.

If Project Costs have changed from the previous CIP, please explain:

Removed unsecured grant funding and updated scope to prioritize electrification. This project will achieve 100% electrified. Budget is for identified near term scope only, and there may be additional long term scope (energy efficiencies, etc.) that may require funding. These changes are part of a reprioritization of decarbonization funding and partly due to changes in the federal grant funding landscape.

Project Description:

Electrification of gas powered equipment and electrical upgrades as needed.

Project Funding Source:

Funded by the Water Fund. Grants will be applied for once final scope items are defined through the design phase.

Project Timeline:

Design anticipated to occur in 2027, and construction to occur in 2028. Project is tied to FEMA funded backup generator implementation funded.

Operating Cost Impact:

Energy cost savings are expected after implementation, but this value cannot yet be quantified.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This scope aligns with the City's Decarbonization Plan.

Project Description:	<i>This project replaces older, deficiently sized, deteriorating, water mains. As utility lines age it is more cost effective to replace segments rather than trying to do spot repairs. It is also cost efficient to replace deficient wet utilities when reconstructing or resurfacing streets. The program is focused mainly on Cast Iron and AC Pipe sized 4" and 6" and locations with frequent break data from Operations.</i>
----------------------	--

Project Funding Source:	There are no grants identified for funding.
-------------------------	---

Project Timeline:	<i>This is an annual project.</i>
-------------------	-----------------------------------

Operating Cost Impact:	<i>There will be no impact on operating costs.</i>
------------------------	--

If Project Costs have changed from the previous CIP, please explain:

Updated for inflation, engineering and contingency estimates

Project Description:

Project will repair the outlet screening and piping to prevent leakage and debris interference. Project currently assumes that the reservoir can be lowered to facilitate repairs. Funding is likely not sufficient if underwater construction services are needed.

Project Funding Source:

Funded by the Water Utility Fund

Project Timeline:

Timeline is heavily dependent on contractor availability

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Reservoir outlet repairs support Council priorities by protecting critical water infrastructure and ensuring reliable system operations. Proactive maintenance reduces failure risk, safeguards water delivery, and advances responsible asset management.

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban farming system that integrates hydroponics, aquaponics, and vertical farming techniques. The goal is to produce fresh, locally sourced vegetables and herbs while minimizing water usage and land requirements. 2. Objectives: - Develop a scalable system for urban farming. - Optimize water efficiency through hydroponic and aquaponic methods. - Maximize space utilization using vertical farming techniques. - Establish a community-based distribution network. 3. Key Challenges: - High initial capital costs for equipment and infrastructure. - Limited space availability in urban areas. - Need for specialized expertise in hydroponics and aquaponics. - Regulatory hurdles related to food safety and zoning. 4. Stakeholders: - Local government (zoning, permits). - Community members (distribution, education). - Local businesses (supply chain, marketing). - Academic institutions (research, expertise). 5. Timeline: - Phase 1: Research and Planning (Months 1-3). - Phase 2: System Design and Construction (Months 4-6). - Phase 3: Pilot Production and Testing (Months 7-9). - Phase 4: Full-scale Implementation and Distribution (Months 10-12). 6. Budget: - Equipment and Infrastructure: \$50,000. - Operational Costs (utilities, labor): \$20,000. - Marketing and Distribution: \$10,000. - Contingency Fund: \$10,000. 7. Conclusion: This project represents a significant step towards sustainable urban food production. By leveraging innovative farming techniques and community support, we aim to create a resilient and profitable urban farming system.	8. Next Steps: - Finalize system design and secure necessary permits. - Procure equipment and materials. - Recruit and train staff. - Initiate pilot production and monitor results. 9. Appendices: - Appendix A: Detailed System Design Diagrams. - Appendix B: Market Research Data. - Appendix C: Financial Projections and Budget Breakdown. - Appendix D: Community Engagement Plan. 10. References: - Smith, J. (2018). <i>Urban Farming: A Guide to Growing Food in the City</i>. New York: Green City Press. - Johnson, A. (2019). <i>Hydroponics and Aquaponics: Sustainable Food Production</i>. London: Urban Farming Institute. - Green, B. (2020). <i>Vertical Farming: The Future of Food</i>. San Francisco: Urban Agriculture Solutions.

During a routine underwater diving inspection of the outlet works of Louisville Reservoir excessive corrosion and damage was noted on the upper outlet screening of the reservoir. The system is still able to be isolated in a limited function. Ineffective screening can allow debris to enter the outlet pipe restricting delivery of water supply. Repairing the outlet works is necessary to ensure the full operations of reservoir.

How it aligns to Council Priorities:

Replacing aging valves reduces water loss, minimizes service disruptions, and advances proactive asset management and fiscal responsibility.

Additional Information/Background

Standard replacement schedule for existing critical assets.

If Project Costs have changed from the previous CIP, please explain:	<i>Consolidating CIPs for Backwash Building and Operations Building. Requesting Operations roof for 2027 and Backwash bldg for 2029</i>
---	--

Project Description:	New 60mm TPO roof covering, upgrade roof insulation to current code.
----------------------	--

Project Funding Source:	Funded by the Water Utility Fund
-------------------------	----------------------------------

Project Timeline:	To be completed during the expansion project.
-------------------	---

Operating Cost Impact:	<i>New Roof will decrease the amount of patching and repairs to the existing roof.</i>
------------------------	--

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining building systems and structures.</i>

Additional Information/Background

This roof may have 3 more years of useful life (not guaranteed). No visible repairs observed.

If Project Costs have changed from the previous CIP, please explain:

Costs were updated to account for actual expenses, finalized financing, and supplemental estimated water quality mitigation work.

Project Description:

Project encompasses the construction of the Chimney Hollow Reservoir. The City's participation provides 2,835 acre-feet of water storage an approximate 45% increase in total water supply storage.

Project Funding Source:

<i>Funded by the Water Utility Fund</i>	
--	--

Project Timeline:

The Northern Colorado Water Conservancy has completed the Chimney Hollow Reservoir and it ready for storing Windy Gap water. Costs are related to the City's payments for the project that will continue until 2056.

Operating Cost Impact:

The new reservoir operating costs will be allocated prorata and assessed by Northern on an annual basis. The City's portion is currently estimated at \$100,000 starting in 2027.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

The proposed reservoir aligns with Council's priorities by enhancing long-term water reliability, drought resilience, and system capacity for planned growth.

Additional Information/Background

The project is a critical component of the City's overall Water Supply portfolio and ensures a reliable water supply.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

This project is for the acquisition of water rights to meet City water usage demands with emphasis on future growth.

Project Funding Source:

Water Utility Fund

Project Timeline:

Given the limited availability of water rights, they will be acquired as they become available and could require funding to be adjusted in timing and amount to facilitate purchase(s).

Operating Cost Impact:

None

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

The acquisitions support Council's strategic priorities by ensuring reliable water supply and planning for future demand.

Additional Information/Background

2026 Utility System Infrastructure Plan, in alignment with the prior 2016 Water Management Plan calls for the acquisition of additional water supplies to address long term supply needs.

Project Description:

The purpose of this project is to provide redundancy in the water distribution system in an isolated section of the system where Lakespur is not looped in the water system. This project will connect Lakespur water main to the water main on Hecla Dr. The alignment of the water main will roughly follow the walking path on the South side of Hecla Lake.

Project Funding Source:

There are no grants identified for funding.

Project Timeline:

This project will be completed in 2027

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This program is driven by the need to improve the water distribution system.

Additional Information/Background

This project will improve the City's water distribution by connecting two different zones therefore increasing redundancy in water supply for the connected zones.

If Project Costs have changed from the previous CIP, please explain:	
---	--

Project Description:	<i>This project will consist of the construction of a new augmentation water delivery structures to allow for the delivery of replacement water from City Sources to Big Dry Creek.</i>
----------------------	---

Project Funding Source:	Funded by the Water Fund
-------------------------	--------------------------

Project Timeline:	<i>This project is contingent on a separate current project to secure pipeline route easements from multiple options that are under evaluation. New access and construction easements will require cooperative agreements with various external agencies and has a high level of uncertainty and negotiation.</i>
-------------------	---

Operating Cost Impact:	Ongoing operating costs are estimated as less than \$5,000 annually
------------------------	---

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>The proposed augmentation station will protecting existing water rights, ensuring regulatory compliance, and support water supply reliability.</i>

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban infrastructure plan for a new city, focusing on green spaces, public transportation, and affordable housing. 2. Key Objectives: - Develop a comprehensive urban planning framework. - Integrate green infrastructure and sustainable building practices. - Enhance public transportation systems and accessibility. - Ensure affordable housing options for all residents. 3. Stakeholders: The project involves collaboration with local government, urban planners, environmental scientists, and community members. 4. Timeline: The project is scheduled to start in Q1 2024 and is expected to be completed by Q4 2025. 5. Budget: The estimated budget for the project is \$1.2 million, covering research, planning, and implementation phases.	6. Risks: Potential risks include budget overruns, delays in stakeholder engagement, and changes in local government priorities. 7. Next Steps: The next steps involve finalizing the project charter, securing necessary approvals, and initiating the research and planning phase. 8. Contact: For more information, please contact the project manager at project.manager@cityplanning.gov.

Water replacement releases are required by decrees granted in 1995 and 2013 to allow the use of certain City water rights. These requirements impacts approximately 1,865 acre-feet (38%) of the City's firm supply. This project will also have the capacity to compensate for additional water rights that could be purchased in the future. The inability to meet return flow requirements will prevent the use of these water rights.

If Project Costs have changed from the previous CIP, please explain:

Minor adjustment to construction cost estimate and added professional services for inspector

Project Description:

This project will facilitate the replacement of the filter media at the Howard Berry Water Treatment Plant. The removal of the media will allow for maintenance and inspection activities to be performed on the filter basins. Planned auxiliary work includes: painting, underdrain inspection and resealing of wall penetrations. Replacement of the underdrain is not anticipated.

Project Funding Source:

Funded by the Water Utility Fund

Project Timeline:

Complete in first half of 2028 during winter plant shutdown.

Operating Cost Impact:

Anticipated lower operating cost due to increased filter efficiency and less frequent backwashing cycles.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project is a critical component of the City's water treatment process and will ensure a reliable water supply.

Additional Information/Background

The existing media was last replaced in 2017, with this project scheduling replacement in 11 years. Industry standard suggest replacement of filter media every 10 to 20 years. The media is currently performing as required and is not showing accelerated signs of degradation. Media material testing will be conducted prior to replacement to confirm failure of performance. If testing suggests material is adequate, the project will be delayed an appropriate period as determined as the time of testing.

Updated for inflation, engineering and contingency estimates

Project Description:

This CIP funds the replacement of the recycle pumps/motors at the Howard Berry Treatment Plant that have been in service for over 30 years. In addition, the access and general conditions will be improved with concrete repairs, painting and misc. equipment replacement.

Project Funding Source:

Water Utility Fund

Project Timeline:

Project requires scheduling around plant operations and will likely occur early or late 2027 when water demands allow.

Operating Cost Impact:

None

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Replacing the recycle system supports Council priorities by strengthening infrastructure reliability. Proactive investment reduces operational risk, improves efficiency, and supports long-term fiscal responsibility through sound asset management.

Additional Information/Background

The Howard Berry treatment plant utilizes a 500,000 gallon underground backwash recycle tank to store, recycle and discharge process water. An adjacent underground vault is used to access the recycle pumps, valving, instrumentation and to perform maintenance. A backwash operation is a mandatory function for the operations of the treatment plant.

If Project Costs have changed from the previous CIP, please explain:

Updated for inflation, engineering and contingency estimates

Project Description:

This project includes piping of open sections of the Louisville Lateral and the possible replacement of existing piped section to provide for a continuous pipeline from Howard Berry Water Treatment Plant (HBWTP) to the Sid Copeland Water Treatment Plant (SCWTP). In addition this project will integrate the inspection, evaluation, and rehabilitation of the Harper Lake Pump Station to allow for multi-directional flow and redundancy for movement of raw water.

Project Funding Source:

Funded by the Water Utility Fund

Project Timeline:

Design starting in 2028 with estimated construction to start in 2029.

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project will allow for a secure and readily available means of increasing resiliency of the City's water supply.

Additional Information/Background

Project goals will allow for full integration and connect all City's water supply to two both treatment facilities. The project will include a concept defined as Load-Shifting which is detailed in the 2016 Water Management Plan (WMP) and will increase firm water supplies by 100 acre-feet. The increase in supply is anticipated as the City reaches buildout conditions.

----------------------	--

Project Funding Source:	Funded by the Water Fund
-------------------------	--------------------------

Project Timeline:	Project timelines will be defined in 2029
-------------------	---

Operating Cost Impact:	Minor increase in operating cost anticipated for additional chemicals and new treatment system maintenance.
------------------------	---

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Addressing taste and odor issues supports Council priorities by improving customer satisfaction and confidence in the water supply. Proactive mitigation enhances water quality and treatment reliability while demonstrating commitment to public health and service excellence.

Additional Information/Background	
1	1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms and the underlying causes of the problem.
2	2. The second step is to gather information about the problem. This involves collecting data and identifying the stakeholders who are affected by the problem.
3	3. The third step is to analyze the information. This involves identifying the key issues and the potential solutions to the problem.
4	4. The fourth step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem.
5	5. The fifth step is to implement the plan. This involves putting the plan into action and monitoring the progress of the solution.
6	6. The sixth step is to evaluate the results. This involves assessing the effectiveness of the solution and identifying any areas for improvement.
7	7. The seventh step is to communicate the results. This involves sharing the findings of the evaluation with the stakeholders and the public.
8	8. The eighth step is to develop a long-term strategy. This involves identifying the steps that need to be taken to prevent the problem from recurring.
9	9. The ninth step is to monitor the progress of the strategy. This involves tracking the progress of the strategy and identifying any areas for improvement.
10	10. The tenth step is to report on the progress of the strategy. This involves sharing the findings of the monitoring process with the stakeholders and the public.

The City has historically experienced water quality challenges in Louisville Reservoir, Marshall Lake, and more recently in Harper Lake. Specifically, Louisville Reservoir has experienced several widespread taste and odor events, the first algal bloom in Harper Lake occurred in 2020, and Marshall Lake experiences turbid sediment loads containing high levels of manganese as a result of the 2013 flood in Boulder County. The City has explored a wide variety of management strategies across the three reservoirs to deal with their unique water quality issues. In recent years staff has purchased an automated algae imaging system (FlowCam) to monitor algae growth in the reservoirs as well as testing localized treatment. These ongoing efforts allow the City to customize specific solution(s) to prevent or mitigate algae impacts. In addition, staff is evaluating permanent treatment systems for algae and other mitigation efforts to nutrient impacts from raw water sources to maintain expected finish water quality from the treatment plants.

In 2017, the Water Treatment Plants installed all new instrumentation designed to monitor processes and equipment throughout both Water Treatment Plants. This gives the Plant staff critical information needed to make operational changes when needed and protect public health. Due to product life cycles and advancing changes in technology, these instruments will be reaching end of life by 2029. This equipment is essential to run the plant efficiently and in compliance with CDPHE requirements.

Project Description:	The City maintains over 90 miles of sanitary sewer mains. Staff estimates approximately 17 miles of sewer mains are in need of replacement or lining. This project replaces or lines deficiently sized, deteriorating, poorly constructed sanitary sewer mains. Work is also coordinated with the Street Program to prevent replacements in new streets. The program is focused mainly on VCP sized 6" and 8".
----------------------	--

Project Funding Source:	There are no grants identified at this time for funding of this project. The project will funded from the accounts identified above.
-------------------------	--

Project Timeline:	<i>This project is an annual project.</i>
-------------------	---

Operating Cost Impact:	<i>There will be no impact on operating costs.</i>
------------------------	--

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project will continue to replace old and troubled pipelines. This is an ongoing program. This program is driven by the need to maintain the wastewater collection system.

Additional Information/Background

This is an ongoing program. This program is driven by the need to maintain the wastewater collection system.

If Project Costs have changed from the previous CIP, please explain:

Removed unsecured grant funding and updated scope to prioritize electrification. This project will achieve 100% electrified. Budget is for identified near term scope only, and there may be additional long term scope (energy efficiencies, etc.) that may require funding. These changes are part of a reprioritization of decarbonization funding and partly due to changes in the federal grant funding landscape.

Project Description:

Electrification of gas powered equipment and electrical upgrades as needed.

Project Funding Source:

Funded by the Wastewater Fund. Grants will be applied once final scope items are defined through the design phase.

Project Timeline:

Design anticipated to occur in 2029, and construction to occur in 2030 to be included within this 6-year CIP request. Project timeline is flexible and can be adjusted as needed.

Operating Cost Impact:

Energy cost savings are expected after implementation, but this value cannot yet be quantified.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This scope aligns with the City's Decarbonization Plan.

Project Description:

This project will rehabilitate City owned detention ponds and storm sewers to improve their storm water detention and drainage efficient. The project will follow the recommendations in the Louisville Storm Water Plan to be completed in 2026.

Project Funding Source:

There are no grants identified for funding.

Project Timeline:

This project is an semi-annual project.

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project will ensure the detention ponds and storm sewer continue to function as designed. Maintaining the City's infrastructure is consistent with a City Council goal of addressing aging infrastructure.

Additional Information/Background

This is an ongoing program. This program is driven by the need to maintain the stormwater collection system.

Project Description:	Install Sand Guard System on 53 bunkers on the golf course.
Project Funding Source:	Funded by the Golf Fund
Project Timeline:	12-months
Operating Cost Impact:	No impact

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>Supports Golf Operations in maintaining assets and taking care of what we have.</i>

Additional Information/Background

The bunkers were renovated after the flood of 2013 without bunker liners. The life expectancy of unlined bunkers is 6-7 years so they are due to be renovated. We would like to incorporate the porous gravel liner system from Porous Pave Inc. called Sand Guard. This system keeps the shape of the bunkers intact and protects the drainage gravel so the bunkers stay clean and continue to drain well. Data from our surveys show our bunkers score the lowest out of all the amenities of the golf course so we would like to address the need to improve the performance of our bunkers.

Project Description:

Purchase and plant new trees on golf course and along Coal Creek.

Project Funding Source:

Funded by the Golf Course Fund

Project Timeline:

Tree planting will take place within the year funded

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports the Golf Course Operations and Environmental Sustainability

Additional Information/Background

Due to weather, pests, aging, and the Marshall Fire we have removed over 210 trees from the golf course. We would like to start planting trees to add diversity and improve the health of our forested areas on the golf course.

Project Description:

Replacement of worn interior fixtures, furniture and equipment.

Project Funding Source:

Funded by the Golf Course Fund

Project Timeline:

The project should be completed during the year of funding availability.

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Economic Vitality

How it aligns to Council Priorities:

Maintenance of clubhouse & maintenance office interior furnishing and fixtures supports revenue generation as well as improves the health & safety of the staff working conditions.

Additional Information/Background

High-traffic through staff offices and golf pro shop result in wear and tear of interior furnishings and fixtures. Challenges result with outdated & worn office furnishings, player registration processes and negatively impacting Golf shop merchandising and revenue potential.

Project Description:	Improve maintenance facility compound through paving of the existing dirt parking and circulation areas, improving maintenance staff office and work spaces and establishing a ventilated room for the reel and bedknife grinders.
----------------------	--

Project Funding Source:	<i>The project will be funded by the Golf Fund</i>
-------------------------	--

Project Timeline:	<i>The first year of funding will focus on exterior paving efforts, with indoor improvements following.</i>
-------------------	---

Operating Cost Impact:	No impact
------------------------	-----------

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project will support golf course operations in maintaining existing assets

Additional Information/Background

Paving the circulation and parking areas will help protect equipment which is currently damaged as rocks hit the cutting units and rollers. We are constantly checking the height of cut on the mowers due to the rough terrain they travel over daily. Interior improvements include additional office space so that the Superintendent and Assistant Superintendent do not have to share a small office, along with building a vented room for the grinders to protect the mechanic and other staff members from the grinding debris created when using the reel and bedknife grinders. □

Replace 175 gallon sprayer which will be at the end of its expected usefulness.

Project Funding Source:

Funded by the Golf Fund

Project Timeline:

Replacement of sprayer will be in the year funding becomes available.

Operating Cost Impact:

No impacts

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports Golf Course Operations in maintaining existing assets.

Additional Information/Background

175 gallon sprayer will be 10 years old and at the end of its expected life span. The sprayer is used to spray fertilizers, soil amendments, and fungicides on greens, tees, fairways, and rough. This is an integral piece of equipment for the golf course and a priority in maintaining healthy turf and controlling weeds.

Capital Improvement Project / Material Operational Request (\$10K+) 2027-2032 CIP Budget Request Form

Project Detail and Funding Source

Project Name:	Echo Robotic Ball Picker	Date Submitted:	5/8/2026

Total	-	-	-	-	-	-	-
Impact to Annual Maint/Operating Costs	-	-	-	-	-	-	-

Project Description:

Purchase a robotic ball picker for the driving range. This picker can retrieve 300 golf balls per session and automatically empty them in a receptacle.

Project Funding Source:

Funded by the Golf Course Fund

Project Timeline:

Robotic ball pickers will be purchased and brought into use the year funding becomes available.

Operating Cost Impact:

Variable salary cost savings and lifespan of gas powered range picker extends with this equipment support

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports the driving range at the Golf Course, and allows savings in staff time

Additional Information/Background

We would like to purchase a robotic ball picker to help reduce our carbon foot print by using an all electric robotic ball picker to retrieve range balls. This would greatly reduce the use of a gas driven range picker, reduce the man power picking range balls, and work in tandem with our robotic mower.

Capital Improvement Project / Material Operational Request (\$10K+) 2027-2032 CIP Budget Request Form

Project Description:

Replace damaged and unsustainable strip of turf grass at the driving range with Porous Pave and cobble stone.

Project Funding Source:

Funded by the Golf Course Fund

Project Timeline:

The project should be completed the year of funding availability

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports the Golf Course operations in maintaining existing assets and providing a high-quality user experience.

Additional Information/Background

Remove the turf behind the hitting mat and replace it with Porous Pave. This would expand the space for cart travel and relieve congestion at the driving range. Currently the path is too narrow for 2 carts to travel on which creates an area of dead turf and is difficult for golfers to navigate. If a customer parks their cart to hit range balls there is not enough concrete for another cart to pass without driving on the turf. The range has been extremely busy and the current path creates congestion and confusion for the players. We would like to use a mix of Porous Pave and cobble stone to accommodate the irrigation and drainage that is in this turfed area

Project Description:	Remove and replace damaged areas of the cart path. Add curbing and widen areas of the path to address wear and tear from cart traffic. This project will be integrated into the City's yearly concrete replacement program and coordinated with Public Works.
----------------------	---

Project Funding Source:	Funded by the Golf Course Fund
-------------------------	--------------------------------

Project Timeline:	<i>Projects will be completed as path conditions warrant and funds allow. Panel replacements are intended to be completed during off-peak season to minimize disruptions to play.</i>
-------------------	---

Operating Cost Impact:	No impact to operating budget
------------------------	-------------------------------

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Keeping the cart path in good condition helps reduce ongoing repairs costs to both the course and carts themselves. It also supports a high-quality guest experience to help drive revenue.

Additional Information/Background

Areas of the original cart path have aged, are damaged, and are in need of repair. During the reconstruction in 2013-2014 heavy equipment damaged areas of the path and these areas continue to get worse. We will also be adding curbing where needed and expanding the cart path where cart traffic creates damage. This is will be a continuing project to address the aging cart path and repair a large stretch of the cart path on hole 3 that is damaged from tree roots. .

Project Description:

New practice area for stick & puck users that could include programming and multiuse options. This project will need to include some prospective site evaluation(s) and condition assessments.

Project Funding Source:

Capital Projects Fund (possibly Conservation Trust Fund)

Project Timeline:

Project completion should take place the year of funding, with a construction time frame of 90-days from time of contract approval (weather permitting)

Operating Cost Impact:

A new concrete slab and recreation area will increase operational demands for maintenance.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports maintaining existing infrastructure and recreational opportunities.

Additional Information/Background

Request from RAB & City Council (4/2026) as a component of in-line rink to dedicated pickleball courts. Staff will need to evaluate feasibility/benefits analysis of new concrete pad construction (site TBD) vs. conversion of underutilized or shareable space assets (such as basketball courts). This project could also assist with growing demand for introduction to skating and skate boarding users who would utilize post tension style concrete slabs in advance of using skate park amenities. Pricing estimate based on Mission Green Tennis Court rebuild costs + post tension conversion.

Total	-	-	-	-	-	-	-
Impact to Annual Maint/Operating Costs	-	-	-	-	-	-	-

Project Description:

The project seeks to enhance emergency management and incident awareness capabilities for the City of Louisville by providing a well-equipped and technologically capable space for decision-makers to convene during local, regional, and state-level incidents. The project expands the use of the current training room and equips the recently constructed emergency operations management space to allow essential staff to coordinate response and collaborate during events. The requested project includes the design and installation of conferencing and technology equipment, including workstation furniture.

Project Funding Source:

Grant funding was previously requested and applied for through the Statewide Internet Portal Authority (SIPA) and through Congressionally Directed Spending (CDS), but the City was not awarded. Potential funding opportunities may come available in future years and could be pursued to offset some costs or enhance the space further. If no grant funding is available the department seeks to fund this project as a Capital Improvement request.

Project Timeline:

The desired project timeline is to begin the work in 2027 with a potential for the final stages to be completed in 2028, if need be. In 2027 the equipment and technology will be acquired and the installation would begin shortly thereafter. If installation set backs occur, supply chain issues arise, or other unanticipated delays occur the project would continue into 2028. The targeted completion would be before the end of 2028.

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Safety

How it aligns to Council Priorities:

This project seeks to enhance community safety by providing a functional and well equipped emergency management space for the City of Louisville organization. This project directly relates to the City's preparedness capabilities to manage public safety incidents. There is currently no space within the City organization that supports emergency management in the way a dedicated space, such as this, can.

Additional Information/Background

Beginning in 2019, the police department started the process of creating a space for City of Louisville emergency management operations. Physical construction of the space is now completed and the installation of equipment to enhance radio and cellular communications at the PD building (previous CIP) is in process. This request moves the vision of creating a dedicated emergency management space to its final stages by equipping, furnishing, and providing operational capabilities for City leaders and stakeholders to effectively manage and coordinate City response to a variety of incidents.

Project Description:

Consulting agency review and updates of current (2018) Integrated Weed Management Plan. Focus on weed inventory, pesticide and invasive weed reduction methodology & best practice recommendations, community engagement and advisory board reviews.

Project Funding Source:

Capital Projects Fund & Open Space Fund

Project Timeline:

The project should be complete during the year funded or completed the following year if seasonal limitations apply.

Operating Cost Impact:

The will be no impact on operating costs.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports maintenance of existing assets and infrastructure

Additional Information/Background

High priority for PPLAB & OSAB. Review & updates of the plan are 2+ years overdue based on 5 year renewal recommendation from the 2018 adopted plan. Consideration could be made to complete this project in 2028 or 2029 after budgeted Open Space Planning Documents CIP(s) have been completed. This approach may lower (or remove) community engagement expenses if the topic could be included in OS planning document(s) CIP(s) scope of work.

Project Description:

Replace the vault and electric valve on the reuse water line. The electric valve has failed and currently cannot be replaced due to its proximity to the current concrete vault

Project Funding Source:

We would like to split the cost of this repair with public works. The vault and valve replacement will benefit the golf course and public works when it can operate as it is supposed to.

Project Timeline:

Operating Cost Impact:

Image

Council Priority Alignment

Select One

How it aligns to Council Priorities:

Additional Information/Background

The vault and valve that was initially installed was a public works project. The electric valve has failed and does not open and close as it should. This valve should open when the pumps turn on and close when the pumps shut off so that water does not flow from the ponds back to the water plant. Replacing this valve would benefit the waste water plant so their system works as designed and benefit the golf course so our ponds do not drain back to the waste water plant. We think it should be a shared cost to replace the vault and valve.

Project Description:

Schematic architectural and site design services to further vet opportunities for expanding or replacing the clubhouse.

Project Funding Source:

Project costs will be allocated from the Golf Fund 's captil expenses.

Project Timeline:

Tasks will include procurement of an architectural firm, public input and completion of design options to inform future requests for construction funding. The timing for additional funding requests will vary based on the recommendations of the architect's schematic design work.

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Economic Vitality
How it aligns to Council Priorities:
An expanded and improved clubhouse will help support the financial sustainability of the Golf Course by creating a more attractive community destination. It will facilitate increased revenues through retail and restaurant uses along with potential new revenue sources from non-golf functions. It will also better enable delivery of an exceptional customer experience by supporting the staff who operate the facility.

Additional Information/Background

Due to the variety of options for the long-term future of the clubhouse, it is recommended that these schematic architectural services are first completed to further explore and solidify a viable path forward. Determining facility needs and developing conceptual site and building designs will better inform on-going requests for funding and manage expectations as to scope and potential timing of the improvements.

Project Description:

Replace old tee line on driving range with a new material that can accommodate a tee.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background

Replace existing tee line with a new material that can accommodate a tee. Our current tee line is aging and gets a lot of use. The tee line that is in place not does not hold a tee which makes it hard for golfers to hit a driver on the current mat. There has been improvements in materials for driving range mats so we would like to replace the old mat with a new and improved material that will make the experience at our range much better.

Project Description:

I would like to add post and dowel fencing that is consistent with the current fencing we have around the golf course.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

Image

Council Priority Alignment

Safety

How it aligns to Council Priorities:

Additional Information/Background

We have some areas around the golf course where pedestrians have entered the course thinking the cart path is part of the City's sidewalks. It would be nice to add some fencing to differentiate some of these areas so it is discernable what is the golf course. Some of these funds would also be used to add short fences along holes 6, 12, and 14. This would help keep golf traffic in designated areas to protect turf and naturalized areas on the golf course.

Project Description:

Cleanup, re-align, standardize, and right size the Bomgar PAM environment. Additionally this will allow Bomgar PAM to take advantage of the redundant internet service the City has, allowing access to core services like Water Treatment during primary internet service outages. This will also expand our licensing allowing us to utilize Bomgar PAM for other requested functions we have currently had to turn down due to licensing constraints.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

Increased yearly subscription fee to Beyond Trust. These fees would allow additional devices in PAM as well as covers a second appliance to utilize the secondary internet service.

Image

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
Bomgar is utilized for remote access to a host of services. Its most important remote access functionality is that of access to the controls networks for Water and Wastewater Treatment as well as the various liftstations that move waste water across the city. Ensuring a consistent access method and performance reduces confusion and frustration for operators that depend on this system daily.

Additional Information/Background

Bomgar, now Beyond Trust PAM, was implemented originally in early 2018. The original design did not expect or account for the level and depth that PAM is being used for now. Over the years a patchwork of Virtual machines, physical machines, and various inconsistent permissions and use cases were setup to meet this challenge on the fly. Due to this however, access methodology and performance is inconsistent. This project looks for make a correction with this solution. Implementing standards and hardware capable of the demand and expected increased demand over the next 7 years. Completing this CIP will allow us to clean up access methods, permissions, use standards, and general functionality into only two tiers. All future PAM access will function through the requested infrastructure.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project directly supports core services by maintaining the technology that enables safe and reliable water and wastewater operations. It ensures critical systems remain available, secure, and resilient, which is essential for protecting public health and meeting regulatory requirements. Reliable infrastructure allows staff to effectively monitor and manage these essential services for the community.

Project Description:

CIP would allow IT to take over internal controls networking previously handled by various controls vendors. Establish a standard of MOXA brand switches across all controls sites to ensure consistency and availability of spare hardware. Existing hardware is a mishmash of multiple brands, models, and capabilities with ages that range from as little as 3 years to as much as 20+ years. Many of the existing switches are no longer supported by the manufacture.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

These switches allow the controls networks that provide drinking water to the community and remove waste from their homes to operate effectively. Without reliable networking hardware operators would have to staff the plants 24/7 and manually control nearly all aspects of the treatment processes. Ensuring these systems are in good working order keeps the city in good standing with residents and the EPA.

Additional Information/Background

During the centrifuge replacement project at WWTP, IT was asked to take over the controls network hardware. Previously, controls vendors handled all internal controls networking. IT handed a single ethernet connection to the controls vendor from our firewall and the vendor handled the rest. Due to turnover and different controls vendors coming in over the years, the network has become inconsistent such that many vendors are no longer willing to work on this portion of our controls systems and expect internal IT to handle these devices.

2027 would see the Waste Water Treatment Plant switches refreshed. Utilizing the experience replacing these we would replace Water Treatment switches at both sites in 2028.

Project Description:

Project would cover the installation and provisioning of a fire supression system in the City Services Server Room, Rec Center Main Server Room, and PD Server Room. These rooms, especially City Services are housing major investments in Server and Networking hardware. These investments should be protected with fire supression system.

Project Funding Source:

Capital Fund

Project Timeline:

6 months

Operating Cost Impact:

May reduce insurance but very little impact to operating

Image

Council Priority Alignment

Select One

How it aligns to Council Priorities:

Additional Information/Background

City services houses approximately 1/2 of the entire city's server virtualization hardware and 1/2 of our on premissis backup systems. It also houses several expensive pieces of networking hardware and multiple battery backups in addition to access control hardware. If this room were to become a complete loss due to a fire without proper fire supression and alerting, replacement costs would be well past \$500k before recabling and reconditioning costs associated with the physical location. Rec Center and PD house smaller but similar purpose hardware. Currently the only IT room with fire supression is the Server Room at City Hall. As we work to make servers and backup systems geographically diverse, this will ensure these other rooms are appropriately prepared. This project looks to correct this from a fire safety perspective.

Project Description:

This project continues the work towards enhancing city owned fiber for internal and potentially leased external use. The contingency is high on this to account for unknowns as we work with Intrepid to complete fiber to various locations around the city. This does not include fiber for SWTP or future fiber between NWTP and SWTP.

Project Funding Source:

Capital Project Fund

Project Timeline:

3 months

Operating Cost Impact:

No Operating cost impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background

This projects includes the following

- Conduit and fiber from WWTP to Library as well as additional strands from Library to City Hall.
- Conduit and fiber from RV Dump Station to Splice Case, connecting RV Dump Station to WWTP or Library
- Fiber from Tech Center Lift station and South Boulder Road Lift Station to City Services or WWTP as needed
- Conduit and Fiber from leased HR offices to retire comcast connection and vastly enhance speeds.
- Conduit and Fiber for quadplex ballfields and pumpstation on 95th
- Miscellaneous costs to make use of intrepid fiber at telemetry, lift stations, and parks around the city.

Impact to Annual Maint/Operating Costs	4,500	34,500	39,500	39,500	45,000	45,500	208,500

Project Description:	<i>This project will replace all existing Utility Rocket modems in the patrol cars with Cradlepoint modems and Starlink satellite internet services. This project will need to be approved if the Police Department requests to replace the Utility body cameras with Axon body cameras.</i>
----------------------	--

Project Funding Source:	
-------------------------	--

Project Timeline:	From the time Police informs IT that utility will not be renewed, we anticipate 90 days to receive hardware and schedule installation. Once hardware is in hand we expect no less than an additional 90 days for installation, validation, and move to production.
-------------------	--

Operating Cost Impact:	Base service fees increase. Starlink is more expensive than cellular but expected to be far more consistent and faster than cellular for the officers on patrol. Through the "Impact" program that provides reduced cost starlink services, the patrol cars will receive starlink services for roughly 1/6th the cost of regular service. In addition to this, IT will be expected to take on management of the in car routers which require a cloud license to remotely manage, "Netcloud".
------------------------	--

Image	Council Priority Alignment
	Safety How it aligns to Council Priorities: <i>By ensuring officers have access to network based services reliability even during major emergencies, officers are better equipped to respond to any scenarios that present themselves.</i>

Additional Information/Background

The existing cellular modems in the patrol cars are from the body cam contract with Utility. The modems are nearly exclusively managed by Utility. IT has no real access to manage the devices. If the utility contract is not renewed at the end of its term, the patrol cars will need alternative network hardware. Multiple IT staff have utilized cradlepoint modems in multiple police departments with excellent results. IT staff looks to build on that prior success by incorporating Starlink satellite service into the solution. These two products combined will provide our officers with significantly increased bandwidth and reliability over the cellular service currently in place on the patrol cars.

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project supports core services by helping protect City assets, facilities, and public spaces, while supporting staff and public safety efforts. Keeping security camera systems up to date is also important for cybersecurity, as older equipment can become vulnerable to unauthorized access or exploitation. Modern systems reduce these risks and ensure the City maintains a secure, reliable, and effective monitoring environment.

Impact to Annual Maint/Operating Costs	-	-	-	-	-	-	-

Project Description:

Our SQL Server environment requires a licensing upgrade to maintain Microsoft compliance and support. Completing this Project will reduce compliance risk, ensure audit readiness, and provide a secure foundation for future data platform needs.

Project Funding Source:

Capital Fund

Project Timeline:

Operating Cost Impact:

NA

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

SQL supports a variety of core systems across the organization, including EnerGov, Tyler Financial, GIS, Lucity (Utilities), the Police RMS, and the SCADA WIMS platform. This Project will be used to secure foundation for our data.

Additional Information/Background

SQL is a foundational database software used by multiple applications. SQL versions have a set lifespan before there set for end of life. End of life" (EOL) for SQL Server means that Microsoft has reached the point where it no longer provides standard support for that version. In practical terms, it affects security, compliance, and operational risk. Running SQL Server beyond EOL exposes the organization to security vulnerabilities, audit findings, and potential downtime.

Project Description:

Install fiber from McCaslin to South Water Treatment Plant. Connecting the plant to city owned fiber allowing us to retire the old Point to Point wireless connection passing through the Rec Center.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

The north and south water treatment plants run in tandem with each other the majority of the year. Without reliable network between the two locations, operators have to fill in the gap when network is offline. Nearly all of the outages at SWTP in recent years have been because the Rec Center lost power taking the SWTP Point to Point wireless connection offline. Finally connecting SWTP to fiber would increase reliability, speeds, and consistency.

Additional Information/Background

The south water treatment plant has been on a point to point wireless connection since its original construction. The other end of the point to point wireless resides on top of the Rec Center. This connection pathway is narrow and barring major tree removal will eventually become obstructed. In addition the Rec Center currently has no generator. Since the Rec Center was remodeled, utility power has been extremely inconsistent. The power inconsistency has lead to many outages where the South Water Treatment Plant can no longer be seen on the controls network at North Water Treatment Plant. The plants work in tandem and when visibility is lost between the two, operators must fill the gap manually. This project would allow us to connect South Water Treatment Plant to city owned fiber. All sites between SWTP and NWTP on this fiber have generators allowing the connection between NWTP and SWTP to stay online during even a city wide power outage.

Project Description:

This project will replace existing Synology storage devices with updated equipment to ensure continued reliable access to shared files and data. The new system will improve performance, increase storage capacity, and enhance data protection through updated backup and security features. While much of our files are going to the cloud we still foresee a need for premised based storage.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

NA

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project supports core services by maintaining critical data storage infrastructure that staff rely on for daily operations and service delivery. It ensures information is secure, accessible, and protected against loss, while supporting efficient internal workflows. Reliable access to data enables departments to continue providing timely and effective services to the community.

Project Description:

This project will implement and expand timeclock systems across City facilities, allowing employees to use their existing access control badges to clock in and out. The solution will replace manual or inconsistent time tracking methods with a more efficient, accurate, and integrated system. Additional timeclocks will be installed to improve accessibility and ensure all departments can utilize the system. This solution will also tie into our timekeeping system and reduce manual work of time tracking.

Project Funding Source:

Project Timeline:

3-6 months

Operating Cost Impact:

NA

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project supports core services by improving workforce management, accuracy, and efficiency in payroll and time tracking processes. It reduces administrative burden, minimizes errors, and provides employees with a simple, consistent way to record their time. Ultimately, this enhances internal operations and allows staff to focus more on delivering services to the community.

Project Description:

This CIP will address inadequate street lighting that was not completed with older developments. (Examples - Centennial Parkway from Via Appia intersection to Cherry Street (4 - 8), Century Drive from Centennial Parkway to Dillon Road (3), Infinite Dr (1). etc.)

Project Funding Source:

Transportation Capital Fund

Project Timeline:

Yearly project to install missing street lights

Operating Cost Impact:

None

Image

Council Priority Alignment

Safety

How it aligns to Council Priorities:

This aligns with Councils goals of safety.

Additional Information/Background

In addition staff reviewed aerial photos and electric utility mapping to determine areas of deficient street lighting. The addition of street lights will improve the safety of pedestrians and cyclists by reducing longitudinal dark areas especially at critical locations.

Operating Cost Impact:	No operational impact
------------------------	-----------------------

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project supports the city's strategic planning critical success factors of reliable core services and engaged community.</i>

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban farming system that integrates hydroponics, aquaponics, and vertical farming techniques. The goal is to produce fresh, locally sourced vegetables and proteins while minimizing water usage and land footprint. 2. Key Objectives: - Develop a scalable system for urban environments. - Optimize water efficiency through closed-loop systems. - Integrate renewable energy sources for power and heating/cooling. - Engage the community through educational programs and local markets. 3. Current Progress: - Completed site selection and initial design. - Secured funding from local government and private investors. - Conducted feasibility studies on various crop and protein production methods. - Established partnerships with local universities and research institutions. 4. Challenges: - High initial capital costs for infrastructure and equipment. - Regulatory hurdles related to food safety and zoning. - Need for specialized technical expertise in hydroponics and aquaponics. - Competition from established commercial agriculture. 5. Next Steps: - Finalize detailed architectural and engineering plans. - Obtain necessary permits and approvals. - Begin construction of the pilot facility. - Recruit and train staff.	6. Stakeholder Engagement: - Regular communication with local residents and businesses. - Participation in community events and workshops. - Collaboration with local schools for educational programs. 7. Timeline: - Phase 1 (Design & Funding): 6 months. - Phase 2 (Construction & Setup): 12 months. - Phase 3 (Operation & Scaling): Ongoing. 8. Conclusion: This project represents a significant step towards sustainable urban food production. By leveraging innovative technologies and community support, we aim to create a model for future urban farming initiatives.

This project aligns with the City's Comprehensive Plan (2026)

Capital Improvement Project / Material Operational Request (\$10K+) 2027-2032 CIP Budget Request Form

Impact to Annual Maint/Operating Costs	-	-	-	-	-	-	-

Project Description:

This project will connect the water systems of Dogwood Circle neighborhood (Hunter's Ridge Subdivision) and Louisville North 1 Subdivision together improving the reliability of the water system by adding a loop.

Project Funding Source:

There are no grants identified at this time for funding of this project. The project will funded from the accounts identified above.

Project Timeline:

This project will be started and completed within the 2027 calendar year.

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This program is driven by the need to improve the water distribution system.

Additional Information/Background

This project will improve the City's water distribution by connecting two different zones therefore increasing redundancy in water supply for the connected zones.

Capital Improvement Project / Material Operational Request (\$10K+) 2027-2032 CIP Budget Request Form

Total	-	-	-	-	-	-	-
Impact to Annual Maint/Operating Costs	-	-	-	-	-	-	-

Project Description:

This project includes installation of approximately 1600' of 42"/48" RCP through the Coal Creek Village Development. The storm drainage piping system will convey drainage water from property west of the site (i.e. property on north side of S Boulder Road between Main Street and Garfield Ave) to Drainageway 7-1. Proposed storm piping will be installed with the subdivision improvements by the developer with reimbursement by the City.

Project Funding Source:

Storm Water Fund

Project Timeline:

The timeline will follow the construction of the subdivision Coal Creek Village (anticipated 2028)

Operating Cost Impact:

This will add 1600 feet of piping to the storm system and require some occasional maintenance/jetting.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This aligns with maintaining the City's infrastructure (Storm Sewer)

Additional Information/Background

Currently stormwater from the west is conveyed along the north side of S Boulder Road to a curb opening and pipe connected to the Goodhue Ditch. A majority of the Goodhue ditch downstream of this location has been abandoned and drainage flows need to be re-routed into an approved drainageway. This project will re-route the drainage flows to Drainageway 7-1 (once constructed). The project will help alleviate potential flooding in portions of the city and in the Goodhue ditch. This project aligns with the goals of maintaining our storm system to protect coal creek.

Capital Improvement Project / Material Operational Request (\$10K+)

2027-2032 CIP Budget Request Form

Project Description:	Replace Water Heater at end of life. Replace Asphalt shingle roof at end of life.
Project Funding Source:	Capital Fund
Project Timeline:	Water Heater in 2027. Roof will be replaced when it's end of life is met.
Operating Cost Impact:	No impact to operating costs.

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining building systems and structures.</i>

Additional Information/Background

The Roof of the Arts Center was installed in 2007 and will be at the end of its life in 2027. Although the roof still appears in good condition, Asphalt Shingle roofs have a life expectancy of 20 yrs. and funds should be allocated at this time. The water heater will be at its end of life in 2027 and should be replaced.

Project Description:	The (2) elevators at the Library are manufactured by Schindler and were installed in 2008. Shindler no longer makes parts for these units and Facilities is currently purchasing used parts from ebay. Recommending the modernization of both elevators.
----------------------	--

Project Funding Source:	Capital Projects Fund
-------------------------	-----------------------

Project Timeline:	RFP in Q1 of 2027. Parts and materials at the time of this request have a 3-7 month lead time.
-------------------	--

Operating Cost Impact:	<i>New Elevators will require less maintenance and service calls.</i>
------------------------	---

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining building systems and structures. This project also supports ADA requirements.</i>

Additional Information/Background

These elevators offer access to and from the underground parking to the plaza for both staff and patrons. When the elevator is down for service, patrons need to use the stairs. Upgrading these elevators will decrease the amount of downtime and need to search for parts.

Project Description:

New MAU unit for Pre Treatment Building. Costs are for an Electric unit to be install if electrical infrastructure allows.

Project Funding Source:

Water Fund

Project Timeline:

To be completed in 2027 or at the end of life. An electric unit will be installed once electrical load evaluations are completed for the Decarbonization plan.

Operating Cost Impact:

N/A

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project aligns with Councils priority to support core services by maintaining building systems and structures.

Additional Information/Background

The Makeup Air unit for the Pretreatment was installed over 15 yrs ago and is cooling only. This project would include a rooftop package unit that will provide both heating and cooling to the building.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

Funding will provide replacement of existing diffusers equipment in the three aeration basins at the wastewater plant.

Project Funding Source:

Funded by the Wastewater Utility Fund

Project Timeline:

Project will take multiple years as only one basin can be taken out of service while maintaining treatment capacity.

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Replacements will reestablish aeration performance and energy consumption, while extending the life of critical treatment infrastructure.

Additional Information/Background

The diffuser heads are beginning to age and have not been replaced since the plant came online in 2017. One basin is taken down during the summer each year for cleaning and inspection. Anticipated lifespan of these diffusers is between 10-15 years. The current plan is to start in 2030 and finish all three basins by 2032. Installation will take place during the summer when only 2 out of the 3 basins are in operation for treatment capacity. All three basins need to be in operation during the winter months.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

This project will facilitate the replacement of the PRV valves, control panel, lighting, and ventilation.

Project Funding Source:

Funded by the Water Utility Fund

Project Timeline:

Tentative for 2030

Operating Cost Impact:

Anticipated similar operating cost. Efficiency improvements for remove control and monitoring.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project is a critical component of the City's water distribution system and will ensure a reliable water supply.

Additional Information/Background

The existing PRV's were last rebuilt in 2018, with this project scheduling replacement in 12 years. Industry standard suggest replacement every 10 to 20 years. The PRV's are currently performing as required and is not showing accelerated signs of degradation. Testing will be conducted prior to replacement to confirm failure of performance. If replacement is not required the project will be delayed an appropriate period.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

Funding will provide structural concrete repairs and a protective coating/liner system for the treatment basins at the Sid Copeland WTP and Howard Berry WTP.

Project Funding Source:

Funded by the Water Utility Fund

Project Timeline:

This project will need to be coordinated with winter time plant shutdowns

Operating Cost Impact:

No impact

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project supports Council priorities by preserving critical infrastructure. Proactive rehabilitation prevents structural deterioration, reduces long-term costs, and extends the service life of essential treatment facilities.

Additional Information/Background

The concrete sedimentation basins are beginning to show more significant signs of wear and pitting at both water treatment plants. Staff has been patching areas when needed during our regular cleaning and maintenance. A long-term solution is needed to preserve and extend the life of this basins. This project includes a structural and engineering assessment to determine the best concrete repair and coating/liner solution.

Project Description:

The purpose of this project is to connect existing Drainageway 7-1 to existing Coal Creek Drainageway 7-2 allowing storm water to flow continually downstream.

Project Funding Source:

This project has been submitted to the Mile High Flood District (MHFD) for consideration of matching funds. If accepted MHFD project funds are equally matched.

Project Timeline:

Design for this project will begin in 2029 and will be concluded by 2031.

Operating Cost Impact:

This project may require additional maintenance to keep the new channel in operating condition.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This program is driven by the need to maintain the storm sewer system, and provide effective stormwater control.

Project Description:

Replace cooroded metal doors at both North and South Plants

Project Funding Source:

Water Utility Fund

Project Timeline:

Complete in 2027

Operating Cost Impact:

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project aligns with Councils priority to support core services by maintaining building systems and structures.

Additional Information/Background

The doors in the Cholrine rooms have become corroded due to the environment. The request is to replace necessary parts and hardware, or full door replacement.

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background

The replacement of this skid steer was evaluated for a potential transition to an electric model. After assessing the anticipated duty cycle, operational requirements, and total cost, it was determined that proceeding with a diesel-powered unit is the most appropriate option at this time. The electric model is estimated at approximately \$400,000, compared to approximately \$66,000 for a comparable diesel unit. In addition to the significant cost differential, as of 2/24/26 the available electric model does not have the capacity to operate hydraulic attachments, which represent the primary operational function of this unit. Based on cost considerations and functional limitations, the diesel option is recommended. In the year prior to the scheduled replacement, available grant opportunities will be evaluated to determine whether external funding could support a transition to an electric model.

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background	
-----------------------------------	--

Unit #3406 is a 2017 John Deere utility task vehicle (UTV) that is used to access areas that are not accessible by pickup style vehicles as they are off the paved roads. This allows the storm water department to get to and from these areas in a reasonable amount of time with tools and the ability to remove debris build up in these secluded areas. The Operations Division believes this vehicle could be replaced with an electric vehicle that would have greater capacity than the existing unit as well as follow the electrification plan.

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background

Staff propose installing an underbody wash system to reduce corrosion on snowplows caused by road salt and deicing materials. Currently, many undercarriage components require significant replacement on roughly a five-year cycle due to corrosion. By routinely removing salt buildup, staff expect to extend the service life of these parts, reducing repair and replacement costs. Based on historical maintenance expenses, the projected savings would offset the purchase and installation cost within approximately five years, while also improving equipment reliability and long-term asset management.

Image

Council Priority Alignment

Core Services	
How it aligns to Council Priorities:	

Additional Information/Background

Staff propose purchasing an electric van equipped with a 35-foot reach bucket lift to support sign maintenance operations. This unit would allow OPS staff to store commonly used signs and tools directly on the vehicle while eliminating the need to deploy multiple vehicles to a single site, as the lift is integrated into the van. The smaller footprint compared to the current arborist bucket truck improves maneuverability and site access, and it provides a significantly safer alternative to ladders for mid-height work. This investment enhances operational efficiency, safety, and overall service delivery.

Impact to Annual Maint/Operating Costs	-	-	-	-	-	-	-

Project Description:

This CIP is for the purchase of a high capacity dump truck with the purpose of reducing the number of loads hauled by the Operations team to and from locations within and outside of city limits and eliminates the need to transition a snow plow to a dump truck and lose the ability to have all snowplows out maintaining safe roadways if a water main break occurs during a snow event.

Project Funding Source:

This project will be funded by the Water Utility Fund (70%) the Capital Projects Fund (20%) and the Stormwater Utility Fund (10%)

Project Timeline:

Vehicle will be purchased in 2032

Operating Cost Impact:

Operating cost is assumed at \$10,000 per year.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background

Staff propose purchasing a high-capacity dump truck to improve operational productivity and safety. The current sump trucks are also outfitted as snowplows, which limits availability and requires time-consuming transitions when dump functions are needed during winter operations. A dedicated high-capacity dump truck would increase hauling efficiency, reduce equipment changeover, and allow snowplow units to remain fully deployed for winter response. This investment supports improved workflow, reduced downtime, and safer, more reliable operations during peak seasonal demands.

Project Description:

This pump would replace the current 2019 portable pump that is owned by the city with a newer higher capacity pump with the ability to serve as a secondary option for all lift stations.

Project Funding Source:

This replacememnt will be funded by the Wastewater Utility Fund

Project Timeline:

Vehicle equipment will be replaced in 2029.

Operating Cost Impact:

There will be no impact on operating costs.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Additional Information/Background

Staff propose replacing the existing portable pump used as a backup for the City's sewer lift stations and as an emergency response asset. This unit provides critical redundancy when generators are not functioning or when internal pump station components must be isolated for maintenance or repair. Replacing the current pump ensures continued reliability in preventing sanitary sewer overflows, minimizing service disruptions, and maintaining system resiliency during equipment failures or emergency events.

Capital Improvement Project / Material Operational Request (\$10K+)

2027-2032 CIP Budget Request Form

Project Description:	Full PM on Hotsy in wash bay. Replace fittings, hoses, hardware and perform PM on Hotsy machine. IN the wash bay, replace all lighting fixtures with vapor-proof LED fixtures.
----------------------	--

Project Funding Source:	Capital Fund
-------------------------	--------------

Project Timeline:	Completed in 2027
-------------------	-------------------

Operating Cost Impact:	
------------------------	--

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project aligns with Councils priority to support core services by maintaining city assets.</i>

Additional Information/Background

The Hotsy in the wah bay is utilized by all city fleet vehicles and is used to de-salt operations, plows and maintenance vehicles. The hotsy requires maintenance when hoses break or control boxes do not communicate with the unit. A full PM of the heating unit and components and replacement of corroded fittings and valves will extend the life of the system.

Capital Improvement Project / Material Operational Request (\$10K+) 2027-2032 CIP Budget Request Form

Project Description:

Replace the backup generator at CTC Lift Station with a diesel-fueled unit.

Project Funding Source:

Wastewater Utility Fund and Stormwater Utility Fund

Project Timeline:

Replaced in 2028

Operating Cost Impact:

A new generator may require less maintenance.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project aligns with Councils priority to support core services by maintaining building systems and structures.

Additional Information/Background

The emergency generator at CTC Lift station was installed in ?. Service Calls over the past year are signifying that some parts and components may become obsolete over the next few years. A new generator will support the Lift station's needs more reliably, and parts will be easier to find and procure. Installing a new diesel-powered unit will align with the city's decarbonization goals.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

Implementation of public and fleet only EV chargers across various City facilities to support Citywide fleet electrification and public vehicle electrification.

Project Funding Source:

Funded by the Capital (83%), Water Utility (13%), and Wastewater Utility (4%) Funds. Grants will be adjusted and applied with implementation.

Project Timeline:

Chargers to be installed at City Hall (\$86,000) and HBWTP (\$115,000) in 2028, SCWTP (\$40,000) and WWTP (\$54,000) in 2030, and City Services in 2032. Implementation to be in alignment with fleet electrification and facility decarbonization construction to ensure adequate electrical upgrades.

Operating Cost Impact:

EV charging station are anticipated to have minor impact to operating costs and will be covered within each facilities maintenance budgets.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This scope aligns with the City's Decarbonization Plan.

If Project Costs have changed from the previous CIP, please explain:

Project Description:

This project will consist of the replacement and/or upgrade of various technology at the water and wastewater plants.

Project Funding Source:

Project will be funded by the Water Fund (75%) and the Wastewater Utility Fund (25%)

Project Timeline:

This project involved collaboration and coordination between Public Works (PW) and Information Technology (IT) in capturing replacement and upgrade needs for the City utility.

Operating Cost Impact:

Operating costs impacts are anticipated to be nominal.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Modernized and updating technology, reduces operational risk, and strengthens resilient, data-driven infrastructure management.

Project Description:

Install Solar-powered parking lot lighting. 2024 CIP request was for non-solar powered lighting fixtures.

Project Funding Source:

Golf Fund

Project Timeline:

This project will be coordinated with Golf Staff during off-season. In late 2027/early 2028

Operating Cost Impact:

There are currently only 3 parking lot lights in the lot. Adding additional fixtures will increase the maintenance costs.

Image

Council Priority Alignment

Safety

How it aligns to Council Priorities:

This project aligns with Councils priority to support safety services by illuminating the public parking area

Additional Information/Background

The golf Clubhouse Parking Lot has 2 parking light fixtures. Adding additional lighting will illuminate the whole parking lot.

Project Description:	Funding to construct a greenhouse to grow and propagate plant materials in-house
----------------------	--

Project Funding Source:	Capital Fund
-------------------------	--------------

Project Timeline:	The project is intended to be completed in the year funded.
-------------------	---

Operating Cost Impact:	<i>The project will result in on-going cost savings through in-house production of plant materials as compared to outsourcing.</i>
------------------------	--

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Supports efforts to maximize available staff and financial resources while promoting sustainability and community engagement initiatives.

Additional Information/Background	
-----------------------------------	--

Currently, the City relies on outside contractors to grow and supply annual plants for municipal flower and shrub beds. While this partnership has supported seasonal horticultural operations it also creates ongoing operational costs, supply chain dependencies, and limited flexibility in plant selection and scheduling. This project would provide the opportunity to expand in-house growing capabilities, improve long-term sustainability, increase responsiveness to seasonal planting needs, and allow staff greater control over plant quality, species selection, and timing of installations. Additionally, developing local or internal growing capacity supports resiliency, enhances beautification efforts citywide, and aligns with the City's goals for operational efficiency and environmental stewardship.

A large, empty rectangular box with a dark blue header bar at the top containing the word 'Image' in white text. The box is intended for a diagram or image related to the text on the left.

Council Priority Alignment

Safety
How it aligns to Council Priorities:
<i>A new glass door will improve safety for the building as we use the patio outside of Brooks for the meal program. The current door is solid metal and visibility is extremely limited.</i>

Additional Information/Background

As part of ongoing facility improvements, replacing the existing door is proposed to enhance both aesthetics and functionality. This upgrade will: increase natural light within the interior space, improve visibility to outdoor areas, specifically the patio and create a more open and inviting environment for guests. It will also support a more cohesive indoor-outdoor experience. The project will include the removal of the existing metal door and install a commercial-grade glass exterior door. The new door will be selected for durability, safety, and energy efficiency, and may include insulated or tempered glass to meet building code requirements. Framing and hardware will be compatible with the existing structure.

Project Description:

The replacement of the current chlorination system due to the age and condition of existing components, which are becoming increasingly brittle and difficult to maintain. As the system continues to age, reliability and maintenance demands have increased, creating operational inefficiencies and potential risks to consistent water quality

Project Funding Source:

rec fund

Project Timeline:

This project can be replaced during the Recreation Center maintenance week.

Operating Cost Impact:

This project will help operating cost impact by lowering the operating time for maintenance and repairs.

Image

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
Upgrading to a modern system also advances operational efficiency and fiscal responsibility by reducing maintenance demands, minimizing downtime, and expanding supply flexibility through compatibility with multiple chlorine briquette vendors. This supports long-term cost effectiveness and resilience in facility operations.

Additional Information/Background

The current chlorinators were installed in 2018, this improvement contributes to sustainable asset management by proactively addressing end-of-life equipment before failure occurs, reflecting Council's priority of responsible stewardship of public assets and ensuring facilities remain dependable and accessible for the community now and into the future.

Operating Cost Impact:	
------------------------	--

A large, empty rectangular box with a dark blue header bar at the top containing the word 'Image' in white text. The box is intended for a diagram or image related to the text on the left.

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>The installation of permanent units also represents a long-term investment in infrastructure. Unlike portable or manually managed options, these plunges are designed for continuous use, streamlined cleaning, and reliability over time. This will reduce lifecycle costs, minimize downtime, and provide a more consistent service to patrons.</i>

Additional Information/Background

In addition, the system will incorporate properly sized commercial-grade chillers designed to maintain consistent water temperatures throughout the day, even during peak usage. This right-sizing is a critical operational improvement. It eliminates the current need for staff to repeatedly drain, clean, and replenish units with ice to maintain appropriate temperatures. By removing this labor-intensive process, staff time can be redirected toward higher-value tasks such as customer service, safety monitoring, and overall facility upkeep. It also significantly reduces water waste, minimizes physical strain on staff, and ensures a more consistent and hygienic user experience.

Project Description:	Over the next three years, targeted concrete repair work will be required in several areas experiencing noticeable ground movement and settlement. These shifting conditions have resulted in cracking, uneven surfaces, and joint separation in sidewalks, flatwork, and selected facility hardscapes.
Project Funding Source:	Capital Project Fund (PW Concrete Contract)
Project Timeline:	These project will be performed in the spring before seasonal high usage times or during the annual facility maintenance week.
Operating Cost Impact:	

Image		Council Priority Alignment Core Services How it aligns to Council Priorities: Addressing areas of shifting and deterioration reduces trip hazards and uneven surfaces, improving safety and accessibility for all residents, including seniors, individuals with mobility challenges, and families using public facilities. This supports Council's commitment to maintaining safe, welcoming, and inclusive community spaces.
-------	--	---

Additional Information/Background

During the original renovation, several portions of the planned flatwork were removed through value engineering to manage project costs and remain within budget constraints at the time. While this approach allowed the project to proceed and achieve core facility improvements, it also resulted in certain exterior concrete areas being deferred or completed with reduced scope compared to the original design intent.

Asset mgmt.

Additional Information/Background	
-----------------------------------	--

The operable walls in the Recreation & Senior Center were added at different times. The operable walls have never been re-covered. All operable walls receive annual maintenance each year during our closure week. The walls in the Brooks/Crown and Pool Party rooms have black marks and stains on the vinyl fabric that have come with use and time. Both of the spaces where the operable walls should be re-covered host many outside rentals and parties and the walls are beginning to appear uncared for.

A large, empty rectangular box with a dark blue header bar at the top containing the word 'Image' in white text. The box is intended for a diagram or image related to the text on the left.

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>The amenity encourages active play for youth and families, strengthening community engagement and healthy lifestyles, while also creating opportunities for increased attendance and cost recovery through programming and special events. This project represents a practical, visible investment that improves resident experience and maximizes the return on existing infrastructure.</i>

Additional Information/Background

The pool currently has 2 features the double slide into the deepend and the zipline. Recreational use of the facility has seed reduced numbers in the past 5-7 years and community sentiment via the long-range plan process includes reinvestment in Memory Square as a community asset.

Project Timeline:	Ordered in year of funding allocation
Operating Cost Impact:	

A large, empty white rectangular area, likely a placeholder for an image or diagram. It is bordered by a thick black line on the top and left sides, and a thin black line on the right side. The word "Image" is written in a small, black, sans-serif font in the top right corner of the white area.

Council Priority Alignment

Safety
How it aligns to Council Priorities:
<i>This project aligns with our goal of maintaining safe, welcoming, and functional community spaces that support engagement, wellness, and inclusivity for all users.</i>

Additional Information/Background

The multipurpose chairs currently in use throughout our facility have exceeded their useful lifespan and are showing significant wear and tear. Many of the chairs are no longer structurally sound, with issues including weakened frames, worn seating surfaces, and reduced stability. This creates both safety concerns and a diminished experience for participants.

These chairs are used daily across a wide range of programs and services, including senior programming, classes, community events, rentals, and meetings. Given the high frequency of use and the diverse needs of our participant-safe, comfortable, and supportive seating is essential.

Project Description:	Create batting cages that would have an immediate positive effect on the diamond sport community that continues to grow. Batting cages offer many benefits such as containing equipment in a small area and providing users with another practice space when it is limited
----------------------	---

Project Funding Source:	Rec fund
-------------------------	----------

Project Timeline:	<i>Installed in year of allocated funding</i>
-------------------	---

Operating Cost Impact:	\$500 meeting equipment, and general upkeep.
------------------------	--

A large, empty rectangular box with a black border, intended for an image. The box is positioned in the upper half of the page, below the title and above the text. It is a simple rectangle with no internal content.

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>Improve services for sports complex user groups. Add potential for rental revenues and tournament play.</i>

Additional Information/Background

Outdoor batting cages are essential when field demand is high because they maximize limited space, allowing for high repetition, focused training without needing full field access. The increased number of diamond sports participants has increased the demand in practice spaces. The building of cages has been requested by several co sponsored groups now and they have offered to provide additional funding to see the project pushed through. Staff would like to see these cages replace the playground that is under used, unsafe, and out of the spectators' view. This project could also be considered with public/private partnerships/donations as well as playground/park improvement dollars from a separate CIP request form.

Project Description:

Replacing the existing outdated and costly pool heating boilers with high-efficiency condensing units is a high-impact capital investment that will deliver meaningful, long-term reductions in operating costs while improving system reliability and performance.

Project Funding Source:

Rec Fund

Project Timeline:

Completed in year of allocated funding

Operating Cost Impact:

Modern high-efficiency condensing boilers will capture latent heat from flue gases that conventional boilers waste, they achieve real-world thermal efficiencies approaching 96% when return water temperatures are properly controlled.

Image

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
Investing in modern condensing boiler technology is not simply a mechanical upgrade, it is a strategic decision that supports financial stewardship, environmental goals, and reliable public service. It is a practical step toward doing more with less, while maintaining the high standards our community expects.

Additional Information/Background

Modern condensing systems are designed with advanced controls that allow for more precise temperature management and system modulation. This reduces wear and tear associated with traditional on/off cycling, extending equipment life and lowering maintenance demands. It reflects a strategic approach to managing public assets—investing in infrastructure that performs better and lasts longer.

Project Description:

Our current inflatable was purchased in 2022. Replacing the current inflatable obstacle course spanning a designated portion of the program pool. This feature will extend across the water to create a continuous, interactive challenge that includes climbing, balancing, and sliding elements. Designed for safe, supervised use, the obstacle course will enhance the pool's recreational appeal, increase user engagement, and provide a unique, active experience for youth and families while maintaining space for

Project Funding Source:

Rec fund

Project Timeline:

ordered in year of allocated funding

Operating Cost Impact:

Additional guards are used for the set-up and takedown along with guard during events. This will not change variable salaries as it already included in the current budget.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

The addition of an obstacle course spanning the outdoor pool directly supports the City's priorities of community wellness, efficient use of public assets, and fiscal responsibility. By activating existing pool space with a high-interest feature, the City enhances recreational value without major capital expansion.

Additional Information/Background

The current inflatable obstacle course, purchased in 2022, is expected to reach the end of its usable lifecycle around 2030. This timeline reflects the operational demands associated with its use, including the requirement to fully inflate and deflate the structure after each use and store it when not in operation. These repeated cycles of inflation, deflation, handling, and storage place ongoing stress on seams, materials, and attachment points, contributing to gradual wear over time.

Project Description:

The requested funding is to replace the existing kitchen countertops installed in 2018. After several years of consistent, high-volume use and exposure to varying temperatures, the surfaces are showing signs of normal wear and in some areas cracking of the countertop.

Project Funding Source:

Rec Fund

Project Timeline:

Completed in year of allocated funding

Operating Cost Impact:

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

"Replacing the senior kitchen countertops supports the City Council's Core Services priority by ensuring safe, efficient delivery of our daily meal program. The current surfaces are worn, cracked, and no longer meet optimal sanitation and functionality standards.

Upgrading the countertops will improve food safety, reduce maintenance issues, and support uninterrupted service, allowing staff to focus on providing essential nutrition and social connection for older adults.

☐
☐
☐
☐
☐
☐

Additional Information/Background

As part of ongoing facility maintenance and lifecycle planning, replacement of the countertops is recommended to maintain optimal working conditions. Proactive replacement will: support continued sanitation and cleanliness standards ,prevent the need for more frequent minor repairs over time. Replace the existing countertops with a combination of durable, commercial-grade materials suited for high-volume kitchen operations. Potential material options include stainless steel and solid surface, both of which offer improved durability, ease of cleaning, and resistance to heat and wear. Final material selection will be based on cost, performance, and compatibility with existing kitchen.

Project Description:	The requested funding is to replace the turf in the multipurpose gym due to heavy use and normal wear and tear
Project Funding Source:	rec fund
Project Timeline:	30-60 days
Operating Cost Impact:	\$600 turf maintenance, equipment, and general upkeep.

A large empty rectangular box with a dark blue header bar at the top. The header bar contains the word "Image" in white text. The main area of the box is white and is currently empty.

Council Priority Alignment	
Core Services	
Asset mgmt.	

Additional Information/Background

Gym turf typically requires replacement every 8–10 years due to intense high traffic wear, infill compaction that creates hard surfaces, and degradation of materials. While some turf can last longer with perfect maintenance, factors such as frayed fibers, failed seams, and reduced shock absorption can create safety hazards and indicate the need for replacement

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>The addition of a wind curtain for the Brooks Room patio will enhance our core meal service by allowing staff to maintain visibility of participants without needing to leave the main service area.</i>

Additional Information/Background	
1. Project Overview: The project aims to develop a sustainable urban infrastructure plan for a new city, focusing on green spaces, public transportation, and affordable housing. 2. Key Objectives: - Develop a comprehensive urban planning framework. - Integrate green infrastructure and sustainable building practices. - Enhance public transportation systems and promote walking/bicycling. - Ensure affordable housing options for all income levels. 3. Stakeholders: The project involves collaboration with local government, community organizations, private developers, and residents. 4. Timeline: The project is scheduled to start in Q1 2024 and is expected to be completed by Q4 2026. 5. Budget: The estimated budget for the project is \$15 million, with funding sourced from a mix of public and private investments. 6. Risks: Potential risks include delays in securing funding, changes in local government priorities, and unforeseen challenges in land acquisition.	7. Next Steps: - Finalize the project charter and secure initial funding. - Conduct a detailed feasibility study and environmental impact assessment. - Engage in community consultations and public hearings. - Develop a detailed master plan and secure necessary permits. 8. Contact Information: For more information, please contact the Project Manager at [Email Address] or [Phone Number].

As part of ongoing efforts to optimize facility use and improve customer experience, the addition of a wind curtain is recommended. This improvement will: increase the number of usable patio days throughout the year, improve guest comfort during lunch, support more consistent use of outdoor seating. Install a durable, weather-resistant wind curtain system designed for commercial outdoor dining spaces. The system may include retractable or fixed transparent panels that reduce wind impact while maintaining visibility and natural light. The design will be selected to ensure compatibility with the existing patio structure and aesthetic.

Project Description:

Community connectors and trail design/construction based on priorities determined by Trails System Plan and updated PROS(G) Long-Range Plan.

Project Funding Source:

Shared expensed capital projects fund and open space fund

Project Timeline:

on-going

Operating Cost Impact:

Will require on-going maintenance once constructed.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

Aligns with safety for connections that reduce the need to road travel & use by bikes & pedestrians. Also aligns with sustainability lens to reduce need to vehicles to reach destinations. Lastly, there is a connection to core services with the community desire to increase trail connectivity and use as components of core responsibilities of the PROS department.

Additional Information/Background

Exact locations & feasibility TBD. This is a placeholder CIP that is being carried forward as a priority with the potential to be modified after the adoption of the Trails System Plan & PROS Long-Range Plan

Project Description:

This project will transition the City's Tyler Enterprise systems (Munis and EnerGov) from on-premise infrastructure to a cloud-based environment. Moving to the cloud ensures continued access to full system updates, improved functionality, and the ability to adopt emerging capabilities such as AI-driven features. A temporary resource will be engaged to support the migration and ensure a smooth and secure transition. This additional cost will cover the yearly cost of software as a service. Because it is a

Project Funding Source:

Project Timeline:

2-3 years

Operating Cost Impact:

we will reduce operating cost by roughly 100k per year but increase longterm capital asset cost by 260k per year.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project supports core services by maintaining and modernizing critical business systems that underpin daily city operations and service delivery. It ensures the long-term sustainability, reliability, and security of essential technology assets, while enabling improved efficiency and service delivery to both staff and the community. Munis is our ERP, HRIS, budget, and Payroll system and EnerGov is our planning and permitting system.

Additional Information/Background

This investment ensures the City can continue to operate critical financial and permitting systems with full functionality, support, and ongoing improvements.

Project Description:	CO law mandates police organizations use body cameras to document police interactions with community members. The police department has been utilizing these cameras since approximately 2017. The current vendor agreement expires May 2027 and there are two potential options. The options are to renew with the current vendor or select a new vendor. The Taser device is a less lethal use of force option that can help resolve situations with a lower risk of injury or death, and provides officers with a tool to protect community members and themselves. Included with the Taser is a VR trainer.
Project Funding Source:	The project will be funded through the CIP budget for the duration of the service agreement (7 or 10 years depending on the vendor selected). There may be some grant funding that could come available, and if so, the department would pursue these opportunities to off-set some of the costs.
Project Timeline:	The current body worn camera vendor agreement expires May 15, 2027 and a new agreement will need to be in place prior to that date to ensure no disruption occurs in the department's ability to equip officers with this equipment. The agreement would be for either a seven or ten year term, depending on the vendor that is selected. A seven year agreement will run from 2027 through 2033. A ten year agreement would run from 2027 through 2036.
Operating Cost Impact:	This equipment was funded most recently through the operating budget. Body camera annual cost was approximately \$54,400, in-car dash camera annual cost was approximately \$32,288, and Taser annual cost is approximately \$52,000. The body camera and dash camera's were on two separate co-terminous agreements expiring May 2027. The current Taser agreement is with a different vendor and ends December 2028. There is the potential to consolidate these services into one agreement with a single vendor. The information presented here is based on a quote for service that bundles these three components into one agreement.

Council Priority Alignment
Safety
How it aligns to Council Priorities:
The police department responds to incidents related to public safety on a daily basis. This core service relates directly to the safety of our community and council's constituents. Properly equipping and training police staff to respond to a wide range of incidents is critical to ensuring safety while remaining transparent and accountable to the community.

Additional Information/Background
This project proposal involves enetring into an agreement with a vendor to provide equipment and support services for body cameras, fleet (dash cameras), Taser devices, and a VR trainer. Entering into a seven or ten year agreement provides a longer term potential cost savings compared to a five year agreement. The longer agreement provides for equipment updates and enhancements at various intervals during the service agreement term. This provides updated and current technology at scheduled intervals, at no additional cost. By entering into a longer term contract, we also have the benefit of locking in 2027 pricing for the duration of the agreement. Body cameras and Fleet (in-car dash cams) assist in recording critical information and are tools that protect the officers, community members, and the organization. They are also important in documenting incidents from an evidentiary perspective. The taser device is an effective less lethal option that aids officers in resolving volatile situations and protecting themselves and others. The taser component of the project also includes a virtual reality training device to better prepare officers by using scenario based training through the virtual reality simulator.

Project Description:

This request funds multi-year agreements for critical software systems that support daily City operations, including communication tools, cybersecurity services, network access, and data storage. These platforms are essential for staff to securely access systems, communicate, and deliver services. Treating these agreements as capital investments reflects their long-term value and the City's reliance on them for ongoing operations.

Project Funding Source:

Project Timeline:

Operating Cost Impact:

100% of this request is being moved from the operations budget to capital. This is not a new request.

Image

Council Priority Alignment

Core Services

How it aligns to Council Priorities:

This project supports core services by maintaining the technology foundation that enables secure communication, data management, and protection of City systems. These tools are critical for ensuring reliable service delivery, safeguarding sensitive information, and supporting efficient operations across all departments. Investing in these systems ensures continuity, security, and long-term sustainability of City services.

Additional Information/Background

If Project Costs have changed from the previous CIP, please explain:	Updated project costs based on 30% engineering design cost estimates.
---	--

Project Description:	<i>This project will fund the design and construction for required process improvements for the handling of water treatment process residuals at the Sid Copeland Water Treatment Plant.</i>
----------------------	--

Project Funding Source:	Funded by the Water Utility Fund
-------------------------	----------------------------------

Project Timeline:	Currently under design and 30% recently completed. Design into 2028 with bid for construction.
-------------------	--

Operating Cost Impact:	Anticipated similar operating cost. Some additional equipment maintenance and chemical costs should balance with reduced manual work from staff and troubleshooting with lower pond.
------------------------	--

Council Priority Alignment

Core Services
How it aligns to Council Priorities:
<i>This project is a critical component of the City's water distribution system and will ensure a reliable water supply.</i>

Additional Information/Background

Staff has determined that the current residual management process at the Sid Copeland Water Treatment Plant has limitations that will inhibit future plant operations. Residuals from the treatment process are currently discharged to the sewer to be handled by the WWTP or recycled from the lower pond to the Louisville Reservoir. The estimated design and construction allocations have been revised based on the recently completed 30% design for the proposed mechanical belt filter process.

---	--

Project Description:	<i>This project will fund the design and construction for required office work space at the Sid Copeland Water Treatment Plant.</i>
----------------------	---

Project Funding Source:	Funded by the Water Utility Fund
-------------------------	----------------------------------

Project Timeline:	Recently completed feasibility planning and 30% design. Final design is anticipated through the remainder of 2026, with construction occurring primarily in 2028.
-------------------	---

Operating Cost Impact:	Anticipated operating costs are expected to remain similar, as the larger administrative area will be offset by a more efficient and functional space.
------------------------	--

Image

Council Priority Alignment

Core Services
How it aligns to Council Priorities: <i>This project aligns with Louisville City Council goals by reinvesting in critical public infrastructure and supporting reliable water treatment operations. Expanding the outdated 35-year-old SCWTP administrative space will improve staff capacity, operational efficiency, technology support, workplace safety, and emergency readiness. These improvements help the City continue providing essential services.</i>

Additional Information/Background

This project contemplates expanding the 35-year-old administrative space at the SCWTP to better support current staffing and operational needs. The improvements include increasing the number of offices from one to at least 10, operator workstations from two to 14, and bathrooms from one to three, along with adding a dedicated technology room, conference room, locker rooms, and a breakroom.
